This was a small project I started a long time ago, I never finished. It simply replaces all the third person models with the Higher detailed first person models.

After I got somewhat started it kind of felt like a pointless thing to do. The only two worth looking at are the Sniper rifle and Pistol, which have fixed the fixed muzzle flashes.

This package includes the Gmax source files aswell as the W3D files to be palced in your data folder.(Pistol, Chain gun, Sniper rifle, shotggun, Autorifle, Rocket luancher) These dont work with renguard.

If they worked with renguard id love to use them.

Quality over performance!

They shouldn't affect performance anyways unless you were in a game in a pretty large battle with around 30 people or higher.

I'll give them a whirl.
