Hi there guys,

Well, i'm having some problems to Run RenGuard. I install Renegade, update to version 1.037, install RenGuard and when i execute it a Withe Window appaers and then come the "It's not responding!" error.

I have followed the Tutorial and it continues to crash, i don't know what can i do. I tried too many times and i always have the same problem.

It could be a FireWall problem, but i dont know how to disable that FireWall on WindowsXP with ServicePack 1.

Somebody can help me?

(Sorry because of my bad English   )

if you want to disable your firewall, go to the control panel and click on windows firewall. you should be able to turn it off there.

I don't think its a firewall problem. I don't have a solution but I wish you good luck.

I dont know what the problem is, but my comment is, I HAVE IT TOOO
I have had it one time in the past and a reinstall of renguard did the trick, didnt do it for me this time though.
im going to try doing full blown reinstall/restart of possably renguad and renegade, hopefully it works.
btw, this time the problem came after my antivirus took too much procceser power, i fell out of bottom of map and screen went red, i had to alt-ctrl-delete and close it, now renguard wont work.

if anyone knows the problem please i would like to have it fixed.
I am running xp sp2 with 1.8 gig processer and a gig of ram, and its installed on a 160 gig hard drive with almost nothing installed
EDIT- its not a firewall problem, windows xp firewall just tell it to allow and other firewalls same, I am running sygate personal firewall PRO (not the free version)
