We would've told you earlier but we were all busy playing!

Swing on by <http://www.apathbeyond.com/> to read up on the release changelist, get yourself some download links, announce that you wanna mirror the files, or learn about what's coming down the road.

Yeah, we said Friday, but we released at 11 PM EST Thursday.

Here is the source code for the server-side scripts shipped with the RA:APB 0.9935 FDS, for all the modders to use.

Unzip this over a straight scripts.dll 2.5.x codebase and work off that.

EDIT: You will need Visual Studio .NET 2005 to use the supplied project files, for Visual Studio .NET 2003, use the project files from the 2.5.x zip file and add 4bot_lite.h, 4bot_lite.cpp, profile.h and profile.cpp to the project.
