Hey guys,

wierd problem all of a sudden popped up. I started up my server, and I couldn't !bl, or !forcetc, it always said gamelog has to be enabled. Went thro all my config, made sure it was, and it was.

So what file should I 100% make sure has gamelog enabled, and could someone plz send me that file (to overwrite mine)

thanks

I think if you have a corrupted gamelog file it can cause it to be unable to load properly.... not sure though.

If it is you could just delete the gamelog txt files for old games (or if you want to keep them move them all to a seperate folder, and move them back 5 or so at a time so you can single out the damaged one and remove just that)

Dan, I have always deleted them so I don't think its that.

Anyway, I'll PM dead6re to view this thread and see what he says

I need to know what version of brenbot you are running.

Version 1.41 Or Lower

Enable_Gamelog=1
Enable_NewGamelog=0
Gamelog_Archive_Logfiles=0
Write_Gamelog_to_SSAOWlog=0

Also check that gamelog.txt is being created. Open your FDS directory and run the server.exe - DO NOT RUN BRENBOT AT THIS TIME

If gamelog.txt is being created then you can start, otherwise you will have to check the options in ssaow.ini

In the brenbot.cfg (in not sure of the verison), its says:
BlazeRegulator/BRenBot 1.41 Win32

Also, when I start just the server, it does make a renlog.txt, but thats it.

Could someone send me and tell me where to original files needed so I can just overwrite the files?

You need to download and install the SSAOW 1.5

http://black-cell.net/SSAOW1.5WFDS.zip

I had this before and never managed to really solve it. What I did was open brenbot.dat with an sqlite editor and delete all the entries in gamelist and then delete all the c&c_field.mix, ... (or were

they called differently?) and results01.txt, ... in my renegadefds directory.

Then restart brenbot and set gamelog on. usually this worked until it happened again.

It's solved now as I'm using brenbot 1.43 now.

http://black-cell.net/SSAOW1.5WFDS.zip

I think I have 1,5, but anyway, ill reinstall.

Goztow, where can I get 1.43? And does it have the same options as the other version, and does it take more resources/space?

Sorry, didn't add: I'm beta testing it. It's not public yet. It has way more options and uses way less ressources. It still has some bugs, Packhunter is working at it but he's a busy man. It'll release once the bugs are all out. I presume he'll get more time this summer to do it.

If renlog.txt is the only file being created you do NOT have ssaow installed. SSAOW makes gamelog.txt

Like goztow said it is not quite finished yet. I think it is already better then 1.41 as it is now though. I want to have it 99% bug free for the final release but if you like I am willing to give more people access to the beta for those that can't wait for that final release. Since I am doing this for you guys

---

and because I don't want to be one of those never ending projects... Just give me a pm if you want in.

As for the release date, that is still a bit uncertain. I haven't got any time to work on it at this moment, but this will change again in a few weeks I hope.
