ok i've been havin a big problem with ssaow. i did remove it for some point and just had my serverside mods in place but i've decided to go back to it and try to fix it.

basically some times the server crashes when mines/beacons have been placed, an attempt at disarming them have been made but they have then gone of and blown up a building. when the building blows up the server restarts. Only happens when a failed attempt to disarm it has been made and it only happens when i have ssaow 1.5 in place. I've tried reinstalling it so its not a faulty install.

any ideas much appreciated.
thanks buffymaniack

Hmm, this is new, never heard of this one.

FDS re-install? It will probably help if the server restarts.

i've tried everything. reinstalled the fds, reinstalled the bot, reinstalling ssaow. i mean it doesnt happen when i use scripts.dll 2.8 but when i run ssaow it crashes as soon as a failed disarm happens.

its really weird, so any suggestions welcome.

 i recommend 1.4.1, cos 1.5 has the 'bandwidth checking killer' people will disconnect heaps and
complain about lag..lol

i duno if your find this crashdump much use but what i've done is taken the code from ssaow and
upgraded it to the 2.8 release of scripts.dll in an attempt to get it to work. everythin else still works
fine and it only still restarts on the failed disarm so technically the crashdump should still report
the same error. if its no use let me know.

it's pretty useless if it is a custom scripts.dll

Yeah, SSAOW only works with the scripts it's given with.

well the ssaow works perfectly fine the same as it did with the original scripts file it just crashes on that same point so surely the crashdump will contain the same error. but i dont know much about crash files so i may be mistaken.

Crashdumps that come from modified versions of SSAOW are useless since the addresses will be different.

Well it wasn't completely useless. It tells you he's getting knocked up by a null pointer and his description of when it occurs gives you a fairly good idea of where to start looking for it.

ok i'll put the original ssaow files back in use and get the crashdump from them. in the mean time could someone tell me how i can use the exeception address given in the current crashdump to search through the source to see where the problem is. im quite new to usin the crash files.

I run SSAOW 1.5, and at random times, everyone in my server will disconnect. Could it be SSAOW 1.5 doing this?

I run SSAOW all the time on my server and players play for hour with complaints of lag or disconnects. Must have just been the way you installed it, or the way you edited SSOAW.ini.
