Did you check this: http://www.renegadeforums.com/index.php?t=msg&th=19350&start=0&rid=4882 ???

Could you also try putting Norton anti virus off? It doesn't like renguard.

You can use game2.exe (in your renegade directory) to play without renguard until you can fix this.

same problem, but explain to me why people keep making new threads about this when 10 other people have...I have had a few answers, I didn't even try some of them...so I don't think there is a solution until Rengaurd 1.04 comes out eventually.

I had this problem for about 6 months. It started about a month and a half after I installed the First Decade, and I have always had Norton. Therefore it is my belief that niether of these are responsible for it.

Unfortunately, after looking through these forums since the problem started, the only solution I can see is reinstalling windows. That's what I did, and now Renguard works fine with Norton AND The First Decade.

As for 1.04, it won't ever come out. So don't get your hopes up.
