This is the problem I ran into, can somone please help me? BTW I just recently installed it, I don't know how it could be currupt. Just check it out

```
------------------------------------------------------------ -
|Microsoft Visual C++ Runtime Library                  [X]|
------------------------------------------------------------ -
```
Buffer overrun detected!

Program: C:\westwood\renegade\game.exe

A buffer overrun has been detected which has currupted the program's internal state. The program cannot safely continue state and will be terminated.

```
------------------------------------------------------------ -
```
Nox......

Do you use Windows 2000/2003 or Windows XP 64bit? If so RenGuard doesn't work with them OS's as of yet. I would suggest using game2.exe (No RenGuard) to play for the time being.
