I downloaded RenGuard, installed it normally. and ran it.

It told me I had 3 file errors, I already knew this so I downloaded the replacments from RenGuard.

1

2

3

I now get those errors before Renguard loads, and before the game itself loads. these images are from before RenGuard loads. Before the game loads, the title changes to the RenGuard files, as in game2.exe.

any help?

You need to put these files in renegade/data - folder and not in Renegade - folder.
