Subject: RenGaurd Installion Problem
Posted by sp131 on Mon, 25 Dec 2006 19:13:23 GMT

I have a huge problem with rengaurd. I have been, until about a year ago been using rengaurd. Then it was uninstalled. Kinda. Now, when i run the setup, it says "Cannot be modified" if i select the "Repair" or "Modify" options. If i select "Remove" it seems to work fine. But then it's the same as before. I have tried removing rengaurd from the control panels "add and remove" function, nothing happens. I click remove and nothing goes.

If anyone can help me out, I'd really appreciate it. And sorry in advance if this is something thats been covered before.

You'll need to delete all registry keys that renguard instored. But I can't exactly tell you which ones.

I don't know that much about computers. Can you tell me how to delete those registry keys?

then you obviously searched not good enough. i just searched for it and im pretty sure blazer is talking about this post:

 http://www.renegadeforums.com/index.php?t=msg&th=18641&start=0&rid=2 #msg_189018

hope this helps

O.o

Now i feel really stupid and happy. Thank you very much. Im not sure why I couldnt find it...

Thanks to all of you for your help.

never mind

but you should report back if its working for you so other people with the same problem will find the solution faster / will directly see if the problem has been solved.
furthermore a mod can decide to close the thread once the initial question is answered/solved. (dont know how they handle it here exactly).
anyways... a little feed back will always be appreciated i think.

regards
