Wrong forum, This is RenGuard forum, Not Win32 forum or NightReg forum.

Did you install a Renegade FDS? (Free Dedacated Server)

you can now use any valid serial number (starting with 0069) to put in there, try a few random serials, but if you can't find one then reply, i will put in a link with about 20 valid serials. and after you complete installation, edit server.ini (in C:/Westwood/RenegadeFDS) and change it to the code you have on the back of your Renegade case. It should be fine...then when you start NR just put in the location of where you saved your server.

I wanted to help because I just went through that...and support chat takes you nowhere...so your welcome.
