[View Forum Message](#) <> [Reply to Message](#)

---

grab it from <http://www.sourceforge.net/projects/rentools/>

Changes in 3.1.1:

A fix for the bullet hole/decal flicker/z fighting on ATI cards

A proper working fix for the version mismatch problem

A fix for various crashes including one caused on loading C&C\_Last\_Stand and one caused when a savedgame I have is loaded. If you were getting "single player" crashes on loading (either a savedgame or a level), this should make them go away.

Further post process improvements (be sure to use the new postprocess.sdb file and if you are building your own the new pp\_combineupscale8.fx file)

A fix for the alt-tab crash (if you still get alt-tab crashes, post and I will see what I can do)

A fix for the crash preventing the dll from running on the FDS

Oh and for those wanting an installer, SaberHawk is working on one for 3.1.1 which should be available soon.

You mean 3.1.2 or 3.2

I appreciate your work you do for Renegade, even if many people here do not do that.

Viking wrote on Sun, 07 January 2007 10:52 FIRST POST W00TSAUCE!

Sorry...

I just tried to play with scripts 3.1.1.

Joined an empty server, minimized the game while in gameplay pending state -> CRASH !

[http://www.ice-gfx.com/files/renegade/crashdump7\\_1\\_06.txt](http://www.ice-gfx.com/files/renegade/crashdump7_1_06.txt)

Note: It didn't crash with 3.1.0

I already have a working NSIS installer for BRenBot 1.50 which could be altered slightly to install client side scripts if you want it.. all you need to do is change the registry key it looks up from the FDS one to the Client one (or add both)

And 3.1.2 still crashes on alt-tab... When you click to maximise again from taskbar the screen turns brighter for a moment, then pauses, and then Renegade just closes...

This time it had a crashdump though (First time it's ever given one with this)

EDIT;

Download mirrors;

I get a crash when I alt-tab and then want to go back to renegade. It didn't happen in 3.0, though 3.0 had that graphics flicker bug and also that bullethole bug. They have been fixed in 3.1.1. Now if just that crash bug gets fixed it'd be perfect for a while. Goin back to 2.9 (has none of these bugs)

EDIT: I see 3.1.2 now after I refreshed that SF page? Does that fix it?

EDIT2: Nice, they're all fixed in 3.1.2, good job jonwil

---

---

Subject: Re: scripts.dll 3.1.1 is out

[View Forum Message](#) <> [Reply to Message](#)

---

ok, firstly, I already have an installer (or rather SaberHawk does). He needs to update it to 3.1.2 and upload it.

As for danpaul88 and that crash, what specs do you have?

There is a known serious bug with xfire and scripts.dll 3.x, try disabling xfire and see what

happens.  
Other than that, no clue.  
Does it happen every time you alt-tab?

Anyone else still experiencing alt-tab crashing with 3.1.2?

---

Subject: Re: scripts.dll 3.1.1 is out  
Posted by [danpaul88](#) on Sun, 07 Jan 2007 15:21:13 GMT  
[View Forum Message](#) <> [Reply to Message](#)

---

The alt-tab crash still occurred even with Xfire turned off, so it's not caused by that. So far it has happened every time I have tried to alt-tab.

System specs;  
Pentium 4 3.0ghz +HT  
1024mb RAM  
Radeon 9800se 128mb

Software;  
Catalyst Control Center 1.2.2243.38605  
Graphics Driver Version: 8.231.0.0  
DirectX December 06 redistributable

EDIT: Also attached a crash-dump from when I tried it with xfire turned off, incase it helps at all.

I am not crashing but I am getting this weird effect:

<http://s27.photobucket.com/albums/c175/r315razor/Stuff/?action=view&current=game22007-01-0715-04-23-64.flv>

I apologize for the off sound and the frozen first 5 seconds. It didn't record properly.

But what you should notice is the scrolling sun glare. It also happens on some other lights on other maps. Like street lights in m07 or the white/red lights on the back of an orca or apache.

I have:

Pentium 4 CPU 2.0 GHz

1.24GB RAM

My Graphics card is an ATI Radeon 9550.

---

danpaul: PLEASE PLEASE PLEASE DON'T INCLUDE THE SAMPLE SHADERS.SDB. It only really works right for one map and is included as an example for that specific reason. There is no reason for any regular client to include that file in their install as they will see glitches in most maps.

<http://4camp.net/scripts312.exe> for installer. This installer will update Direct3D if it determines that you don't have it properly update and also handles installing on a 'fresh' install of Renegade that has been properly patched.

danpaul: Still shouldn't be included because of "wierd graphics" glitches that people are reporting.

cmatt42, there is a known issue with xfire and 3.x, you will need to stop using xfire (or at least the "xfire inside renegade" part) until it is solved by the xfire team.

---

---

Subject: Re: scripts.dll 3.1.1 is out

xfire and renegade play quite nicely together here...

And saberhawk: I already updated the downloads on my site to not include the shaders.sdb file.

EDIT: I notice you didn't include sdbedit.exe or keycfg.exe in your installer, any particular reason behind this? It would be easy to add an extra section under the bloom section to install them

Wow... Even though I had the exact same files in my Renegade folder, the bloom never worked, but I use the installer and it defiantly does now:

Although the sun does get rather huge with it, will this be changed later?

All I am having problems with slowly scrolling lens flares.  
I am using a computer with a Nvidia Geforce FX 5200.

Oh wait, no one ever said to put postprocess in the data folder, that explains why it never worked.

(Excuse the double-post; I decided to add this after the edit button expired)

Not too big of an issue, but right now the "hud" command doesn't completely remove the objects on screen, such as the credits, time left, fps/etc, and the player list. I would like to have this fixed.

In the tunnel for those who can't see it.

To me, it looks like a vis error, that's in the map not in scripts.

Another thing i noticed was that FRAPS displayed that there was 42 frames per second in one of those images, yet Renegade was displaying that there was only 20 frames per second. What's going on there?

I think I said something about this before:

Jerad Gray wrote on Wed, 27 December 2006 22:38Another problem I have noticed is that certain shiny objects will show through other objects if you have a Nvidia graphics card. This problem does not occur with 2.92 but with 3.0+.

Example pictures below:

And when you get closer:

And look how thick these doors are!:

This only happens if I have scripts 3.0, 3.1, or 3.1.1 in my renegade data directory.

ATI X800XT

Just so Jonwil knows.

Also using 3.1.2

Use the Catalyst Control Center (download it if you don't have it already:  
<http://ati.amd.com/support/drivers/xp/radeonx-xp.html>)

For ATI cards, that link is for the X800 Series.

Using that program you can adjust your card's abilities. The reason your lon cannon and some other stuff looks all pixilated, is cause of your settings, not shaders. (I am 80% sure of it)

I am still wondering if you (Jonwil) would be willing to add a multi scripts loader in you next version of scripts.dll. Like the one seen at:

[http://sourceforge.net/project/showfiles.php?group\\_id=176277&package\\_id=202669&release\\_id=444016](http://sourceforge.net/project/showfiles.php?group_id=176277&package_id=202669&release_id=444016)

This would be very helpful to me, as I would no longer have to rename you scripts every time you came out with a deferent scripts package. And when I released my mod I would not have to get everyone to go through the trouble of renaming you scripts just so they could play my mod.

I tried it, the installer version, without the bloom option cause I definitely think my graphics card (Intel Extreme Graphics, integrated with up to 64mb memory) can't run it

Problems:

1. Flickering bullet holes when moving mouse (not picture)
2. Flickering damage marks when moving mouse, like those blackened places after an explosion. (both pictures)
3. Is the lighting supposed to be that way? I mean, black light coming out from doors??? (both pictures)

just like Comrade, i also faced evil pixels wich refused to die.

Occured using latest scripts and a nvidia based 3d card  
(xfx 6600gt). I can randomly let this happen is i alt+tab or minimize a lot and then go back ingame.

Also the semi-fix for decals is quite obvious... maybe they could be made a little less floating.

edit: oh yeah, before i forget. is it possible to come up with a fix for the agt trying to shoot  
purchased nod vehicles inside planes? when the plane is in the sky, and visible for the agt, it  
tends to hunt it down with no success, redering gdi's defence occupied for quite some seconds.  
i believe this had to do with the invisible harv bug, but this is one nasty side effect you dont want  
to face when trying to defend vs a flamer rush.

I sure most of the errors are coming from using the shaders.sdb that i came with or using bad drivers/missing DX9 stuff.

get rid of it, it's crap.

Now get your asses to microsoft and nvidia/ATi and get your drivers

nvidia, you should use 91.\*\*'s [www.nvidia.com](http://www.nvidia.com)  
ATi, new drivers out today 7.1's [www.ati.com](http://www.ati.com)  
DX9 updater <http://4camp.net/dxwebsetup.exe>

Xfire bug was fixed last time I talked to saberhawk.

If you want less bloom, open the SDB editor that came with the last set and go to file>open and then open prepossesses.sdb or what ever it's named.

I have to tell you guys, my computer is a pile of shit and the only bug I have had yet is the xfire one and some simple game engine bugs, lol.

thanks for being danpaul88's echo.

anyway, im sane enough to realize i have everything up to date. also, when you think about it, it makes perfect sense:

the invisible harv bug was fixed by not turning vehicles invisible in the first place before they are delivered.

this means a visible part of the nod vehicle will always stick a bit out of the back of the neutral cargo plane. On mesa, the cargoplane flies well within the agt's range (one of the few maps where this is the case, so indeed, its hard to notice).

the agt sees a tip of the tank, and ofcourse starts shooting it, even tho it doesn't have any effect. In the end the agt can be found firing at the wall for a few seconds, because it keeps a lock-on on the nod tank for a short while.

anyway, screw this minor bug, lets consider it a random feature like all other bugs. fell free to contribute, just dont walk in, suggesting scripts is flawless, and that the problem is therefor caused by myself, making it look like im some casual noob. thanks

PaRaDoX wrote on Thu, 11 January 2007 02:24I sure most of the errors are coming from using the shaders.sdb that i came with or using bad drivers/missing DX9 stuff.

SaberHawk already mentioned that shaders.sdb is not meant to be used, it was included as an example only. Only postprocess.sdb should be in your data folder from the scripts download

Jonwil, I'm sure you remember me complaining about how certain parts of my doors were showing through the outer door, but only if I was using 3.0 3.1 and it didn't happen with 2.9. Will I finally found an object in Renegade that this also happens to.

This can be seen on every map I've tried, but you have to be able to get far enough away from the HON to see it. I will continue looking for an object that better shows this. I hope you will be able to correct what ever is causing it, and it still happens even if you don't have postprocess.sdb in the data folder.

I still get the lens flare scrolling glitch, but it only happens when ever you get you targeting reticle directly over the center of a lens flare:

Actually in the time it took me to up load those I have just been running through renegades levels, and I'm starting to think it happens when the Suns lens flare is close to another type of lens flare. The sun in those pics is behind the rocks (or the moon).

I think I found a better example, but this could be something completely different to so. Ok there is a map called C&C\_Fusion1, stand between the ref and power and look at the obelisk, walk toward it and tell me what you see, that red thing in the middle disappears.

So does anyone know what new feature in scripts.dll is causing objects with second passes to show through each other. I have disabled every setting in bhs.dll, and even removed postprocess.sdb. But it still keeps happening. This bothers me even more the the dazzle effects glitch (because Renhalo uses tons of shiny objects with second passes, and sometimes you are able to see shiny vehicles through the walls and stuff like that).

I think that there should be a different kind of release for the next version of scripts.

How about a "light" version for those who still want the new scripts but without the framerate-reducing graphics and bugs that happen for some users, and a regular version for those who want the new graphical effects and scripts?

That way, everyone's happy.

If you are experiencing graphical problems, in addition to the already mentioned "upgrade your graphics drivers", try the following (in this order) and see if any of them help:

- 1.Remove shaders.sdb from your renegade data folder
- 2.Remove postprocess.sdb from your renegade data folder
- 3.Disable shaders in the bhs.dll config dialog

Some of the graphics problems are related to changes made by microsoft between Direct3D8 and Direct3D9. (for example the bullet hole glitching is caused because D3DRS\_ZBIAS went away in Direct3D9 and the replacement D3DRS\_DEPTHBIAS works a little differently)

In order to diagnose the problem shown in that movie, I am going to need a PIX log of the problem taken when shaders is off in the bhs.dll config options (i.e. its been turned off and then renegade restarted)

Jerad, do you have MSN/AIM/ICQ/Yahoo?

If so, we can talk there since its easier.

Otherwise I can email or PM you the instructions on how to collect a PIX log.

Basicly a PIX log is a special log of everything Direct3D does, it will enable me to see exactly what Direct3D calls are being used to render those doors that are failing to render properly.

jonwil wrote on Sun, 14 January 2007 04:35ok, looks like there is another single player crash other than the one I fixed  
TSS888, what were you doing when your crash (that happened with 3.1.2) occurred?

It happened right after the cinematic after the 1st mission (The Scorpion Hunters). The cinematic was the one where Havoc liberated a hovercraft from the ship. Right after the cinematic, before the loading screen, it crashes. I could not find any crashdump.txt (I deleted it before playing single player mode).

jonwil wrote on Sun, 14 January 2007 21:39  
Some of the graphics problems are related to changes made by microsoft between Direct3D8 and Direct3D9. (for example the bullet hole glitching is caused because D3DRS\_ZBIAS went away in Direct3D9 and the replacement D3DRS\_DEPTHBIAS works a little differently)

Is there a possible fix to that?

Just to let you know it, seems to happen whenever you have two objects, each with a texture with 2 passes, and the second pass is transparent (like it has screen or add for the second pass).

Ok just to follow up. I havent been able to track down the cause of this particular single player crash. Did it happen in versions prior to 3.0? Which version was the first version to have this crash?

Also, does it happen if you make a savedgame near the end of mission 1 and then reload that savedgame and finish the mission?

Does it happen if you dont have the cinematics disk in the drive (and therefore the cinematic doesnt play?)

Also, the lens flare issue is being investigated and hopefully will be fixed in scripts.dll 3.1.3.

---

Well, first of all I run The First Decade, so I can't say weather or not it works with out the disk.

And also I didn't try it in past versions, I just heard this happening a lot, and decided to try it out for myself, and as it turned out I had the problem too.

About the save, do you mean to save the game just at the end of the first mission? And then load it later?

Cause that is the only time that I can save. Cause after the mission, it shows the stats then the movie, then it shows my desktop.

If that is the case as to were you want me to try and load a save from, I will do it tomorrow.

Nopol10, I do not have an answer for your graphics problem. Especially since so far you are the only one who can reproduce the issue.

As for the single player crash, figuring out which version it first started happening in is important.

You didn't tell what type of graphics card you have. Does it happen to all infantry, or just the GDI soldier?

Forgot to add that the exploding thingy happened to all vehicles and weapons. It's not the infantry that is actually exploded. Sometimes the terrain is totally missing on other maps.

Actually I think I've seen something like it before, but I can't quite think of what was causing it...

Now I remember it was on a game called Homeworld: Cataclysm. It happened on my friends ATI graphics card, in the end we got it fixed; we had to patch the game. When I get home I will read the readme file in Cataclysm and see if they specified what was causing it. If they do I will get back to you guys.

When I get home I will read the readme file in Cataclysm and see if they specified what was causing it. If they do I will get back to you guys.

As for the missing terrain, when I installed Renguard, and had some missing terrain, on field and a few other maps. In the end I reinstalled the game and everything was fine.

Another thing that could be happening is, do if you mod Renegade, if you do, have you ever tried making you own soldiers. Will that almost looks exactly like what happens if you do not WW space wrap (I think that's what it is called) the meshes correctly. Of course if you haven't modded Renegade that's not what is happening.

Regardless, it would be helpful if you would tell us what the computers graphics card is (if you simply don't know how to, all you need to do is go into "Control Panel" double click on the "System" icon (if in classic view) click the "Hardware" tab, click "Device Manager" open "Display Adapters" and there it is. It's as simple as that!).

Does it happen if you dont have the cinematics disk in the drive (and therefore the cinematic doesnt play?)

Also, the lens flare issue is being investigated and hopefully will be fixed in scripts.dll 3.1.3.

Well, I don't really know which version it started in but the first scripts I ever installed was 2.9.2 and that crash has been happening from 2.9.2 till now, 3.1.2. I tried it but it did not generate a crashdump.txt. Just to let you know, I deleted the crashdump.txt from my rene folder before testing this crash.

As for jerards problem, its because (like the bullet hole glitches), there are differences between D3D8 and D3D9 when it comes to D3DRS\_ZBIAS on D3D8 and D3DRS\_DEPTHBIAS on D3D9 (both are supposed to do the same thing but they do it slightly differently hence the problems.) For 3.2 we are going to look into some kind of rewrite of the relevant code or something to fix the issues for good (hopefully).

And now we have scripts.dll 3.1.3. Get it from <http://www.sourceforge.net/projects/retools/>  
Changes:

Improvements to the way we manage ID3DXEffect instances (will fix the other alt-tab crash)

Some small code cleanup

A fix for the sun lens flare bug

Extra debugging stuff for shaders in a few places

Upgraded to Visual Studio 2005 Service Pack 1 and fixed a problem with the crashdump code that resulted from the upgrade

If you are using Visual Studio 2003 or Visual Studio 2005 without service pack 1 and you have problems compiling 3.1.3, let me know  
But I suggest upgrading to Visual Studio 2005 SP1 in any case  
Just make sure except.lib is in the same folder as all the source files and the code will do the rest

An installer is available at <http://4camp.net/scripts313.exe>

Awesome, you fixed the Flare problem.

Here is a texture problem I have been getting (Got it from all versions)

I just thought it was already notified, but since it isn't fixed over 3 versions I will post screenshots:

Notice, that the normal texture is there, but it is over lapped with the default "You don't own this texture" Big white W.

(That is my map Death Pass. I have also noticed this problem on a few other maps, such as Siege)

I just downloaded 3.1.3 and tried it out. I am only getting one error, which i'm not sure if it's the alt-tab crash. When I minimize the game, it is still displayed in the bottom bar, however if I attempt to restore it, the game shuts down.  
All texture issues, including the barracks metal and GT sandbags have been fixed for me. Only thing this needs now is anti-aliasing and anisotropic support

Here is my crashdump for the crash I am getting.

yes, It is doing the same thing for me, Minimizing and crashing on maximize.

---

I believe that the problem is in the updated ID3DXEffect instances.

Cause I remember a while ago when that other D3d9 thing that allowed renegade to use DX9.0c did the exact same thing to me. (I forgot what the site was called)

EDIT: I tried that Single player crash that was happening after The M01 movie, and it is still happening.

I Tried skipping the movie by pushing ESC, but it still crashed.  
I even tried loading a previous save. No luck.

For scripts.dll 3.1.3, the only files that are of interest to people other than those doing mods and such are:

1.scripts.dll, bhs.dll, d3d8.dll, shaders.dll. These go into the renegade folder

2.postprocess.sdb (which can be used if you want to see the bloom effect). This goes in your renegade data folder

All the rest of 3.1.3 (including shaders.sdb) is only of interest to modders.

danpaul88 wrote on Thu, 18 January 2007 19:16  
I was referring to saberhawks post when he was on about people reading the manual (RTFM), I was just pointing out that its not IN the manual (readme.txt), so we cant read it

It's inside bhs.txt along with the rest of the shader docs.

Ok, I stand corrected, although surely it should be mentioned in readme.txt that the information for shaders is in bhs.dll ?

Anyway, the installer does negate this problem, so it's hardly a big deal now....

And don't give me that "the 30 minutes was up" shite, you posted 4 minutes after. This isn't the only time you've done this.

Both Crash dumps were the same name, you try sorting them out.  
Looks like you need some spelling work to.

1. It's not my job to read crashdumps, and
2. "Shite" is actually a word, it is British slang for "shit".

3.1.3

Alt tabbed out of the game, attempted to restore it, it crashed and re-maximised the RG window.

Proverbial attached:

Personally I am inuslted.

I dont run any cheats.

I have some custom textures I have some custom maps.

Renegade worked before I installed 3.1.3 and now I get the aforementioned error.

Edit: I killed ATI Tray Tools and the oridginal error is gone. Now I recieve the error during load that scripts2.dll failed to load.

dllload.txt says "scripts2.dll failed to load, error = 1001"

I have a fix for the alt-tab crash and the quit crash (which are the same thing) but because of work being done for scripts.dll 3.2, I am unable to release a new bhs.dll at this time.  
The workaround is to use bhs.dll (and only bhs.dll) from scripts.dll 3.1.2.

There is a new installer available here that will install the right dlls.  
<http://4camp.net/scripts314.exe>

OK, I tried using the 3.14 installer, it's broke my Renegade.

Was there something I needed to do first?

I get a black screen, and I hear Renegade music in the background for a few seconds, then it crashes.

PS  
This is the first time I've tried updating scripts.

OK, looks like 2.92 is the latest one that works on my Renegade.

Is it possible for you guys to modify these to let npatches work with nVidia cards? Or do I have to stick with this ATi X850XT PE forever? At 5.08 Catalyst drivers no less?

NPatches don't work on nVidia cards simply because they aren't supported by the hardware. If you can upload your crashdump.txt, that would be helpful.

Am using an NVIDIA GeForce FX 5700LE graphics card with the latest driver update.

Will these scripts work for me?

Can I disable the bloom stuff and just run the scripts like I do with 2.9.2?

Actually, nPatches aren't hardware based.

They're driver based, that's why if you get a driver newer than Catalyst 5.08, you can't turn TruForm on.

It hasn't been on the actual card since the ATi 8500.  
It's all done on the CPU now, and, that just means it's been all software based for a while.

I mean the 8500 at this point is a seriously old card.

I guess it would take some serious software modding to enable truform on newer ATi, and nVidia cards.

: (

Here's my crash dump from 3.1.4

This is the place to report bugs right?  
I found yet another one, its not really severe, but i just felt like bringing it to attention. Who knows what other related bugs can be fixed in the progress.

I tested it on 2 computers, both with the latest mix of scripts: The visceriod has 3 scrolling textures over it, one of them always looks pixelized. Like this:

I dont know if this is a magic twist in faith and if it only happens on my computer.

If this is one of those dx9 unfixable problems, no big problem, there are bigger bugs to worry about.

I tried to enable lots of enhancing effects like Antialiasing with the nVidia control panel and this happened to me...now it seems the only effect I can use is Anisotropic filtering up to 16x.

And I use the latest scripts, and it happens in both Renegade and APB.  
I'm guessing, therefore, that it's a DX9 problem.  
And I have DX10, but I doubt that would affect anything seeing as I don't have a DX10 card.

Chances are that even if you card doesn't support DX10 it will still try to use the drivers and mess up Renegade.
