hey,

i don't know why my FPS are blocked at 60, why can't I get more ?

i already seen a program for Nvidia card, but i forgot the link !

so please can you help me ?

thanks

my PC :

Intel core 2 duo E6600 2.4Ghz
7950GT 512Mb
2Gb ram Kingston

The reason why its limited to 60 is because thats what your monitors refresh rate is at. If you want to stop this Use google for VSync. But you do realise that you could have 500FPS it wouldn't matter because the human eyes can't see anything past 75FPS at best. Meaning having 60 FPS would act the same (Including lag) at 500FPS.

True, Tho Newer games that are high detailed (Counter Strike: Source) Would definitely need more than 60FPS.

That PC is way over qualified for scripts.dll (assuming this is renegade - *points at forum name*)

Linky: http://4camp.net/scripts314.exe

Why would you want more than 60 fps?
