I prefer the Rail gun to the Personal ion cannon so i changed the model of the cannon to the rail gun. It does have some flaws cause im a total noob when it comes to changing models. Like i cant get the hand to go on the bottom of the gun like rav has. And i cant get the reload action to happen.
But other than that it works just fine for me. My main purpose of posting here is to get you to put it on the renguard allow list. But if anyone here gets board or wants to be a nice guy and finish it for me i that would be great.

Thanks

The problem with allowing this model is that you would see enemy PIC's carrying a railgun. the PIC weapon is shorter/smaller than the railgun, so by allowing this model you would essentially have a "big gun cheat". By this I mean if a PIC(char) was hiding behind a corner or bulkhead and their PIC(weapon) was not sticking out for them, you would see the long railgun protruding and be able to shoot it and hurt them.

EDIT: I didn't mean to imply that this was your intention, just letting you know why it cannot be put on the whitelist.

I didnt think of that...
The rail gun is my favorite gun in renegade it can kill people decently and it takes out tanks nicely.

I understand thanks anyways.
