I did use the installer.

How do I manually update my DX9.c?

Ok:

Are you using an ATI Graphics card?

Can we have a ScreenShot of this error? (Well, jonwil and Saberhawk could do more with it than me)

Traced the problem to the D3D8.dll file.

It says I have an unknown intel device.

Let me point saberhawk and jonwil in your direction.

There IS a known issue with xfire (specifically the xfire in-game bits) and current scripts.dll versions.

Post your sysinfo.txt and we can add your graphics chip to the list for 3.2.2 (although having "unknown intel device" wont cause any issues)

Heres my sysinfo

I close my xfire when I open renegade too.

Do you close the whole program or just the front-end GUI?
