Okay, so this morning i woke up. Popped onto irc, and i see a whole bunch of people saying there rg isn't working, so i go check mine and i get the same thing as them. "Renguard 1.0322" "Unable to initalize network, perhaps your firewall is incompatible with Renguard." Now not sure how many other people are getting this, but how do i fix it?

Good afternoon wite.

What Anti-Virus / Firewall software do you use?

Well, i asked and we don't really have a virus protector on our computer, we have whatever came with Microsoft. So basically windows security alerts.

Start > Control Panel > Security Center > Firewall Options > Look for RenGuard and Renegade, And Allow them to have Internet Access.

If a lot of people were having trouble, it could be the Renguard servers had trouble. Plz do retry later before starting to fiddle.
