I have just finished making my tutorial for making teleports in renegade using Dantes script. It is quite detailed so you should be able to pick it up easily. You can find it over at http://www.nodnl.net hosted by my friend iscripters.I know a lot of people have asked about making teleports and some people are still a little confused on using the scripts, i have explained it in my tutorial.Hope this helps some of you. I have noticed that some skins that I DL don't work either. I try to use a pack that makes the tib ref tiberuim turn blue and pant the nod flame trooper a cool skin, but even though the blue tib on thne refs work, the flame troop looks all black as if it was the grim reaper.

When you save it as a dds file, press "no alpha".
