ok how can i edit a map and add stuff like turrents and ceiling guns and ladders to top of some buildings like on map field but bot have to save the map and give it to people all they would need is there default field map.....

like on this one serv all i got is basic maps like under so i go to this one sever with the map under they were on but when i join they had new things added and i did not have to download some new map how can i do that like edit field? but not have to send it as a whole new map?

Wow, nice spelling, really makes me want to read what you just said...

Wait... english is your native language? wtf...

On a more serious note: RTFM on [www.renhelp.net](http://www.renhelp.net)

If you can't find it, feel free to die. One way or another, natural selection is going to get you.

Spelling/Grammar: This is a gaming forum, not literature. Keep the urge to correct to yourself. If it pains you so much to see someone misspell a word, miss a comma, etc., give them lessons in private because we don't want to see it on the forums. However, we would appreciate it if everyone's post was at least legible.

RTFM, it needs to be readable, and this one is clearly not.... Its not just a comma, or an extra letter, its just the whole post not making sense....

It really does bother me sometimes to see the people on the internet with the worst English spelling and grammar sometimes happen to be Americans. I'm an American myself, so, yeah...

Let's give the man back his topic, however. Have you heard of Level Edit? At least try renhelp.net, also.

Re-Read a few lines of post, "How to add Turrets, etc", Obviously he needs Level Edit.

After reading the countless topics you have created, and holding myself back from making a rude

reply, I'm going to give you some well rounded advice that you should follow. If not, don't expect to get help here.

1. You need to type legibly. I as others are not going to take the time to help someone if we have to dissect pieces of your post.

2. You need to use the resources already given to you. You've been given one good resource already, Renhelp.net. If you can't seem to follow along with the tutorials there, ask for help on what you are having a hard time understanding. If you still cannot understand, maybe you don't belong in the modding world.

3. There is no need to make a million topics. You can use the same topic for all of these questions. Especially since none of your questions have been answered due to your lack of understanding, there is no need to make another topic.

You need to listen to the people helping you. You need to remember they know more than you do, and you're the one asking for help. With all this said, hopefully you can take this advice and help better yourself.

Download these files:

<http://www.game-maps.net/index.php?action=file&id=522>

<http://www.game-maps.net/index.php?action=file&id=334>

They are the original .lvl files for the westwood rotation maps and xcc mixer. I know you have level edit already, so i will leave that out.

You can open the the .lvl files using level edit, it will ask you if you want to use an existing mod package or you can create a new one. Just create a new one and call it the name of the map.

Once it has loaded (depending on pc this may take a second or two). You can now place things on the map. But note, not everything is server side.

To give you an example of something you can do quite easiliy follow this:

Open a map with level edit

Make sure you have position at cursor selected

Go to MP\_turret\_improved

Select "Make"

Move it somewhere

The go to file, then save level as, and save it to your desktop.  
This will create a few files there, but the important ones for the time being are the ones called .lsd and .idd.

Now, copy and paste the original .mix map from your servers data folder to your desktop.

Now open xcc mixer (this may take some time to load the first time you use it).

Using xcc mixer go file, then open, and browse to your desktop, then open the map you just copied there, the .mix file that is.

The delete the .lsd and .idd files from it

Now, drag the .lsd and .idd files you create that are on your desktop into xcc where you just deleted the old ones, they will now appear there in the directory.

Now a good idea at this point is to rename the original .mix map in your server folder to .bak or something, just so if you need it again you can restore it.

Now place the .mix map on your desktop into your servers data folder and start the server, choosing that as the first map to play.

You should now see the turret you spawned working in-game.

This is a pretty simple way to do it, and there is more you can do, but until you get used to the basics it isnt worth overloading you i think. =]

if thats the thing where can be used as wall and u cant go thru then TY!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!

ok now i got another error where or how can i add

- 1)turrents
- 2)guard towers
- 3)and ceiling guns

i tryed adding a turrent but since i did it it made my serv crashed while the rest of all my mods worked as soon as i add it my serv crashed loading the map

PS is that a gangster "S" in the pic above or the slipknot "S"

well when i build those they wont show up when i play the map but everything else will play.

and do i have to do any other settings? or scripts? for them i jsut put in base and it shoots the enemys?

No, Slipknot would have some kick-ass Gothic themed "S".

Pfft, gangsters can't draw, So it's my special 1337 S.

If all your other spawners are working, and the only ones that arean't are the defensive ones I would be tempted to say there is a line in your scripts.dll's source code that does something like this:

```
void M00_Disable_Transition::Created(GameObject *obj){  
  
    if (strstr(Commands->Get_Preset_Name(obj),"Nod_Turret_MP_Super")) {  
        Commands->Destroy_Object(obj);  
    }
```

But for all the defence vehichles.

reborn idk what that is what im trying to say if i add a guard tower or turrent like u did in the pic ro any other extra base defense they will not show up at all when i play the map but only shows up when editing the files and everything esle works like the extra red wall things and cargo blocks in air and teleporters but not those things why? im using scripts 2.9 for them

---

---

If you are following what I did then it should work.  
What I am suggesting is that when the map loads there is a line of code similar to what I posted that is being called and destroying the defensive vehichles, ie the turrets and towers.

When you create objects in Level Edit, sometimes they will be created behind walls, under floors, etc. you just have to find them. Did you look around to see if you could find them?

no i never added the objects file i just added turrets and guardtower's and moved them and thats about it  
and the wont show up on the map

so after it did ot work i tryed all these settings like adding a BD script and stil nothing so idk
