Subject: LFDS Error

Well, intially when I installed LFDS it worked without any configurations. So, I configured it. I basically configured it nicely how I want it. Then I ran it.

It started out normal for a split second or two, then it starts to output "*** Auto starting game. Type 'quit' to abort ***" in a seemingly unconditional while loop (keeps outputting that millions of times forever).

I troubleshooted and found that this was caused by setting "GameType" in server.ini to "GameType: WOL", it was originally GameSpy.

Anyone have a solution or has had this problem?

Thanks

-Zach

The Linux FDS does not support WOL.
My mod supports WOL for Linux (RH8)

That explains a lot

So you are telling it is impossible to get LFDS listed in Advanced Game Listing on Renegade? Well, without your mod?

Uhm no

 http://www.renegadeforums.com/index.php?t=msg&th=21373&start=0&rid=1 976

The problem is just getting that working. Can be a little difficult
(when you don't know PERL).

Actually I am quite proficient in understanding Perl. I am however a beginner in coding Perl. I've
only done a script or two, nothing big. Also Cat998 I've done a script or two, some more than
others, in all languages listed in your signature, well except Java.

I've just haven't found my true calling in coding.

Go for C++ (and assembly)
[/offtopic]

You know that wouldn't be a bad idea because it would make any other language fairly simple.
But, I really like Perl and it's godly amount of fucking sweet modules. Plus Perl is basically a linux
language ;p
