When I either put the game disc in and click on "Play Game" or I just double click the Renegade icon when the game disc is in, I get this error: Game.exe - Entry Point Not Found.

The it gives me this under that:

The procedure entry point ?Detect_Bandwidth@@YAKKKHAAHAAKKPAUtBandtestSettingsStruct@@PAD>@Z could not be located in the dynamic link library BandTest.dll.

This happened as soon as I installed the game. I have played this game before on this same computer. I got bored of it and uninstalled, then I just installed it again. Can someone help me?

No, it's nothing complicated. Just use the Auto-Update at Start > Programs > Westwood > Renegade > Renegade Auto-Update and get yourself up to version 1.037.

Is the update server still up for that?

Last time i installed Ren it failed to connect. I had to use the standalone updater.
