OK I conducted a search and read this topic:

[http://www.renegadeforums.com/index.php?t=msg&goto=236987&rid=0&srch=reflective#msg\\_236987](http://www.renegadeforums.com/index.php?t=msg&goto=236987&rid=0&srch=reflective#msg_236987)

I gave it a try and it gave me something but not exactly what I wanted. I'm trying to make a reflective floor material. I'm not looking to reflect light but instead I'd like to have the floor have a nice subtle "freshly waxed" look to it and I'd like for it to reflect the walls and the ceiling and the character (or any other objects on top of it).

Is there something I'm missing out? Do I need a better detail texture? Let me know please!!

Thanks again!

Reflecting the charter is not CURRENTLY possible in Renegade, but I suspect it will be in the future.

Hahaha There's nothing in that file.

I think I know which one you're talking about though... Is that the picture of the Star Wars ship docking area with the reflective floor? If that's the picture then YES! that's EXACTLY what I'm looking for.

That's OK if it doesn't reflect the character just as long as it reflects everything else.

---

I like your avatar by the way.

There is a model and textures in the zip file....

EDIT: Here is another texture. Its in the always.dat but if its not reading it then put this with the model.

Oh OK I see the files now...

Before I just clicked on "Open" and it didn't show anything for some reason. I got them now, thanks man! I appreciate it.

EDIT: Is there any way I can see how that material was made? I uploaded the .w3d into RenX but it only shows two boxes which i assume are bones? And when I preview the .w3d in the Commando Level Editor it doesn't display the materials, just that white Westwood invalid texture map. I'd like to see the settings for that texture if that's ok, and if you have the time.

When you export a w3d from 3dsmax, it cant be imported into renx using the import script.

You got to copy the files over to the mod folder to see it in Le.

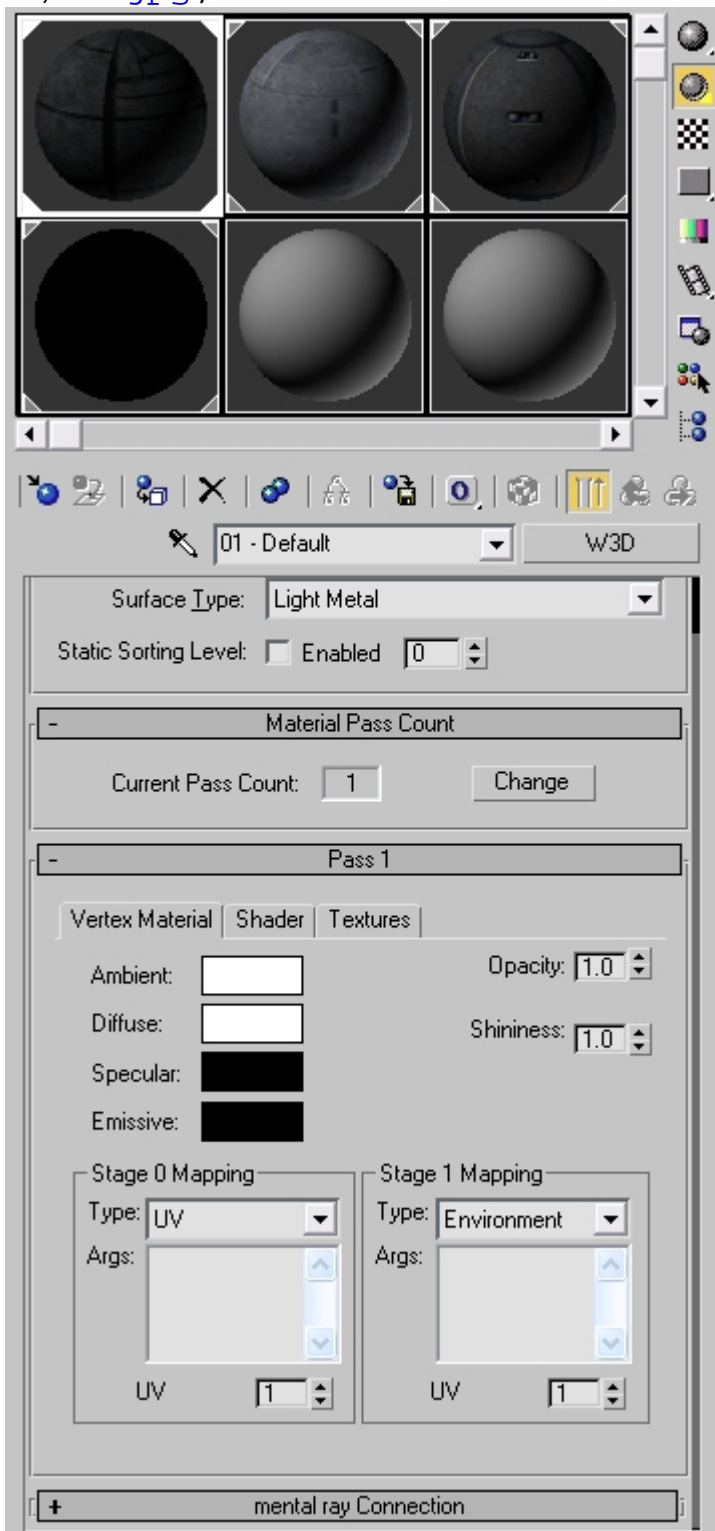

Yeah, i was just wanting to know if thats what you were looking for.

Here is how i have it:

Hmm... Interesting. I have the "freshly waxed" look now but it doesn't seem to be reflecting the walls that are around it. I am making a lot of progress though.

Actual reflections aren't currently possible in Renegade.

There's always the dirty way.

Clone everything, and mirror it below a semi transparant floor.

make sure you use a waxy material on it so it looks reflective or you can play around with other methods.

Like making a screenshot of the environment, and using that as a reflective texture.

Hail xp background.

Actually, rendering a cubemap of the environment and feeding it to the "glass" shader

Heh heh we need to move to a new engine. One that's compatible with 3DS Max materials. If only our maps and weapons and stuff looked as good in the game as they did in 3DS Max.

I must have just been tricked I think. I saw an image of Renegade: A New Hope a while back and I remember the floor reflected everything, even the character. I was hoping that was a snapshot from Level Edit but I guess it was just a 3DS Max render- those bastids. Haha I feel stupid.

could it be possible to setup the char with upside down grav that mimics the players bones exept 180degrees around, then do the "Dirty trick" and make a transpearent floor.  
EDIT: at the bottom of the 1.jpg and 2.jpg there is a title "mental ray Connection" lol.

I swear we need a new engine, even Duke Nukem 3d for DOS had reflections. Later on the slightly upgraded version of the build engine for Lo Wang had all kinds of things that are superior to the w3d engine....we are talking about a engine made for dos and ran on 8mb of memory.

Now with the Duke 3d High Res (Everything is actually 3d modeled now), it's even more comparable.

You said reflecting the character. Reflections aren't possible \*at all\* in Renegade currently (environment mapper does not count, it does not reflection anything.)

I just don't think people have enough inspiration to add on to the engine because it doesn't seem "extensive" enough in certain aspects. Things like Unreal Tournament are not only more recently made but also more extensive and "exciting." Maybe people just see Renegade as too much of a plain first person shooter.

I personally don't see it like that but maybe others do.

Any game and be stretched beyond its limits, it's just all a matter of time and sometimes money. If there would be enough people I'd be willing to join a team in making a new engine so we can do more interesting things like reflective materials instead of these plain cardboard box materials we've been using all this time.

We kinda need the source code before something of that magnitude is taken on.

Shaders are a bit less than incorporating max materials and updating the lighting engine.

EDIT: SaberHawk, care to explain?

Not exactly. Shaders are well, shaders. Some stuff can be done, such as a new lighting system, is doable. Other things are just too hard to do right now, such as real reflective surfaces.

---
