As the title submessage says, i want your opinion on these tanks i put together. I will post them on this thread as they finish.

please give me feedback on the tank, but please dont flame.. i have feelings to.

Marder Assualt Vehicle - Nods attempt at a stronger recon vehicle, cuz lets face it, the buggy is a big bullet sponge.

looks okay,

the gun looks to high to me. Would look better lower, or even sunk right into the turret, the tank would also look better if it was longer I think. Right now it looks like it would roll over on its self

I have a thing for miniture things, so these are small. they share the base of the first tank. (cuz it can suport many turret shapes)

(All of the tanks in this thred were done while i was learning gmax/renx, so thats why they so simliar, i just wanted to get opinions so i could improve them better[base, size, positions, etc])

Easy way of taking screen-shots:

Press 'print screen' --> open image editing software --> paste --> save

I havent tested it yet, but here you are, a beta model.

The Scorpion Tank from Halo!

Please note this is a beta model, it is textured and boned, but i havent tested it ingame yet. I also dont know how to animate textures yet, so the treads stand still, sory.

(This does ot share the same meshes as the other tanks in this thread

All the models I have looked at so far are edited versions of sgtmays models:/. None the less they

aren't so bad. All of them are.. I take that back:|.

as posted above, i have a thing for small tanks >> The base seemed perfect at the time when i made them. If it makes you better, think if it being in IFV. (from RA2)

It isn't finished yet, but what do you think? I've been working on a juggernaut mech. I still need to correctly texture the top piece. But please give me feedback so I can improve it.

The barrels are way too long, it would overbalance and fall over 90% of the time....

Ya, what you need to do to fix it is put a pole on the front gun, and a tricycle wheel at the end of that wheel (jk). But yes the guns are a bit long.

Here is my current project: the Stryker Tank, its an AA tank.

This is in w3d viewer, im about to test it ingame to see if i need to tweak the positions a bit or somethin.

what do you all think? Id like your opinions.

Which rts game is it ripped from?

I guess it looks alright, when viewed from 200 meters up in the sky. I doubt it will look pretty from 1 meter in front of it.

Oh and that's no Stryker Tank according to google...
