Ok, I run a CCTF Server for Renegade and i need to edit my mod. NFHAVOC told me to put bhs.dll, scripts.dll, and scripts2.dll in my
C:/ProgramFiles/RenegadePublicTools/LevelEdit/fdsfmod/scripts

and know when i go to turn on LevelEdit it just dont load and shut-downs.

this should be in the mod forum

i siad go to

start
 then click mycomputer

then click local disk

then click program files

then click renegade public tools

then click the level edit folder

then click the folder with the name of your mod

then create a folder called scripts

then copy and paste your bhs.dll and scripts2.dll and scripts.dll to that folder

this was for the purpose of getting to be able to use the scripts in level edit

---

i dont know why it says that

maybe reinstall the tools

then do all the steps over agian

Do you have The First Decade installed?

If so, click me!

If not, then i don't know.

ive got the same problem, when it loads the preset library then LE goes down with an windows error.
none of the renhulp tutorials and files will help ;(
