First:

Second: More specific please. Whats it doing? A full delete all and re-install usually fixes everything if you are not getting a specific error.

If you have a shortcut on your desktop for Renegade, Right click it, Go to the compatibility tab, Click the box, and in the drop-down menu, Choose "Windows XP Service Pack 2".

Also,

Nvm that, come back in a few years and you will get it.

As for vista, yes it is possible but troubleshooting will have to wait until someone who actually uses vista gets online to help you out.

cncnick13 wrote on Sat, 25 August 2007 18:42i need help i cant play renegade oline now on vista.it says the westwood component i installed is not compatible and i need to reinstall and i did but it still does not work plz help

Install it in Administrator mode, this can be done by:

Right Click CD->Explore->Right Click Setup.exe->Click Run as administrator.

That should fix your issue.

Now to all of those not being helpful, go fuck yourselves and learn how to use the OS before you trash it.

I use Windows Vista 64bit Ultimate and I have no issues. You may just want to uninstall everything and reinstall it from scratch. Make sure you delete everything. If that doesn't work, then you need to go into compatibility editor and change the settings for the game. I never had to do this on any of my vista machines, but it's a suggestion.

Step 1: Throw your computer out the window, preferably from a 5 or more story building.

Step 2: Follow your computer.

cncnick13 wrote on Tue, 28 August 2007 20:03uuhhhh nothing just nogood help

You been given help, you fail at doing what people tell you.

1) Re-install Renegade.
2) Make Renegade run in windows xp mode.

Don't know how?, read the vista booket or something.

Subject: Re: i cant run renegade on windows vista plz help
Posted by cncnick13 on Wed, 29 Aug 2007 01:41:11 GMT

i can run renegade i just cant play online i no how to make it run but not online!!!!!!!

Subject: Re: i cant run renegade on windows vista plz help
Posted by Oblivion165 on Wed, 29 Aug 2007 01:52:47 GMT

Stop posting, slow your arse down and actually read the posts and follow directions.

FOLLOW DIRECTIONS.

I don't want to see one more post from you until you have figured this out. There are plenty enough post from others that would fix this on any windows/vista computer.

FOLLOW DIRECTIONS.

Read very slowly.

FOLLOW DIRECTIONS.

Do each step as you read them. Don't try to do the steps after you read the entire post. You will forget steps!

FOLLOW DIRECTIONS.

If a program is broken or non-responsive and all else has failed follow the Oblivion Creed: Delete All, Reinstall.

FOLLOW DIRECTIONS.

Vista Sucks, deal with it via the Oblivion Creed and get back to a decent OS - Windows Xp Professional SP2

FOLLOW DIRECTIONS.

After every single renegade (in your case get rid of the entire first decade install) related file has been removed manually or by uninstaller, follow every single one of these steps after installation: http://www.renhelp.net/?mod=Content&action=view&id=Getting+Started

FOLLOW DIRECTIONS.

and follow directions.

Ok after reading your post, and laughing so hard, tears poured out my eyes into my coco pops, i want to help you get this working.

First of all im gathering that your renegade is working now, just not your online components?

Ok im gonna ask you something.

Did you get your copy of Renegade in a pack called The First Decade.

If so, try this.

Install Red alert 2 then Yuri's Revenge. Go into yuri's revenge, once at the main menu, click on internet and log in. once you successfully get to the main lobby, exit out of the game.

Now go into Renegade again and try going on the internet again.
