I had an Alien model, and i tried to replace that one for the Havoc model, exactly how Hero did it on the renhelp.net tutorial of how to make a character.
But after i finished, and tried it out on renegade the game crashes when i buy a Havoc.
I think its my pc, but it could be that i made a mistake in RenX

I would appreciate any help
(i rarred the file otherwise it would be to big) maybe thats the reason why renegade crashes, cause the file is to big ;O

Ps. It crash my game too. I im sure the Alien has a skin (DDS File) u need to put it in your

renegade data folder too!!!

True.

It would simply show the fugly WW logo all over the alien model.

I don't have any renegade related software installed at the moment, not even max to test my theory but my first instinct is that you have a bagillion more polys than the renegade engine can handle.

EDIT: Installed just w3d viewer and yup, 27,000 polys is WAY too much. Thats why its crashing everything.

yeah i already thought that indeed, cause when i edited the Alien model (made the head smaller and legs bigger) so it would fit on the havoc model, i saw it created like a million poly's..

so i might have to get a other model
