It's Very Very poorly Coded, stay away from this build, revert back to your old copy its less buggy.

As most things these guys/gals code it was not beta tested very well at all. IMO!

This build is the same one that over 15 beta testers have been running for over 2 weeks now without a single problem. I would love to know how it could have been beta tested any more thoroughly than that Now get back under your rock mr c c \_ren and play with your marbles, since that seems to be all your good at.

By the looks of those errors you were using a database from a 1.51 build, then installed 1.43 over the top of that and tried to update back to 1.52, which the database updater simply cannot handle.

Yeah Thats about the reply expected from \*cough\* people like yourself.

Always hurts to be told the truth ey? well take your head out of your ass and really learn to code properly.

Very simple It's Buggy code, as were your last br codes so instead of replying like some imature child, try going the next level and re-examine it, and perhaps you may see it yet, in other words leave it in beta or maybe even alpha till the average "joe" can pretty much download it and then simply configure it and start it. then release it.

Just cuz you dont hear about it on this forum DONT make it not buggy?.

And simple #1 problem is already posted above your post so ,What were you trying to say mr \*coughs\* full of yourself?

And simple #1 problem is already posted above your post so ,What were you trying to say mr \*coughs\* full of yourself?

I'd like to see you make a good perfectly buggless ground-breaking bot, as you apparently expect.

I have and only use it on my server, and yes it was buggy but i dont release it, cuz it's to far advanced for the average "joe".

And a good programmer should take to Any type of criticism good or bad , as it's all good.

Not reply like some imature child.

It's says alot about the person in question.

The fact u mention that it hasn't been beta tested, clearly shows you ain't got a clue. How can you judge on the code if you haven't even seen it at all?

As far as I know theres nothing wrong with version 1.52. Its pretty good that only one person has a problem which isnt even the programs fault. good work DP

I am just amazed that you can come here and claim it has buggy code, when only 1 person that I know of has yet had any kind of problem with it, it's perfectly stable and was beta tested by a large group of people over many months....

I must say that this is the best brenbot so far. And everyone (should) know that I'm not the greatest fan of brenbot. But it's better then the other often used bots like NR or CS.

Ah, because your much better than any of the many beta testers we already have? You must understand the need to keep the testers group to a specific size, otherwise we might as well just make all the beta versions public...

I assume you disabled your plugins when installing 1.52, as specified in the release notes, in the event of problems with 1.52? As was mentioned in those release notes, many 1.43 plugins will not work on 1.52, and may cause crashes.

Nobody actually listen to this fag, he has NO idea what he talking about AT ALL, he's not even smart enough to get BR setup, let alone actually use it. Danpaul, dont put up with this geek either lol.

I thought saskatchewan had enough of its own problems?

EDIT: This is the same guy that stole my a00 nickname, I chaned the pass so he couldnt use it for his own pure shit server, came to these forums, made a total fag out of himself, said he called his lawyer and the RCMP (royal candaian mounted police) on me, and that swat was gonna raid my home anyday LOL. It seems he now has moved on to APB, and has changed his name ROFL

It's says alot about the person in question.

1. Let me guess, you used lua to code it?
  2. How would you know if it's buggy or not if you haven't used it? I'm assuming you haven't used it because you have your own "highly advanced super-bot"
  3. Ok then, try making a user-friendly bot that's as good as you claim your bot is and release it, then we'll see how buggy it is compared to BrenBot.
  4. There's only one bug for this bot that's known of (this), and you're already saying that this bot is too buggy? Not everything is perfect, idiot.

rofl.

Is brenbot open source?

Plus, you just complained about people not releasing anything, but here, danpaul, released something! There's plenty of people who released crap. And you just said that you were one of them... So why complain about something what people are doing while you are doing it too?

No, I'm not related to Troopr02, he is a idiot, but surely, I'm no similar to him, just against you and your shitty remarks.

btw, I can't read stuff that lacks grammar.

Wow, you need stfu. It's grammar. Trooprm02 never know's what he's talking about. My shitty remarks aren't as half as bad as your's, and you seem to act like you didn't even notice my other ones.

Are you honestly dumb enough to think that I'm kissing his ass? I'm only agreeing with him that

you're some spoiled kid who thinks he's all that. There's no ass kissing involved there. Fuck, I hate troopr02. You need to get your facts right, son of a bitch.

My mouth doesn't spew shit, neither does my fingers. I'm only saying my opinion and reinforcing it with details and more statements.

Only replying to one remark? What about my others? Again, you were complaining about people doing things while you were doing the exact same thing. To me, that's crap. Don't complain about it unless you're not going to do it.

Now, before you become the next forum fool, I suggest you stop posting attempts at being a smart-ass... that's troopr02's job.

This guy is hilarious, I love waking up in the morning to read this sort of crap. I also love how he avoids the main question when asked, it's really funny

Miklo, if your still having problems can you please post the following;

Which version of BRenBot you were updating from.

Which update method you used ( Full Installer / Mini Installer / BrLoader )

What plugins you are currently using, and when you last updated them.

I've had the same problem math

Fixed it now.

open brenbot.dat with your sql lite browser, change the table version in global from 1.51 (or whatever it had) to 1.52

Not sure if it's fully functional but at least it loads without errors

Your database is already partly updated, so attempting to update it again just gives errors.

Try this: Open sqlitebrowser and run the following SQL query;

DELETE FROM banlist WHERE name LIKE "%""%" OR comment LIKE "%""%"

That should remove any entries which are causing the database to crash. However I don't know if that will let it finish the update process properly or not. If you backed up your brenbot.dat before updating (as was recommended) restore the backup and then do the above on that copy of the database.

I installed RenegadeFDS with BRenBot 1.52 FULL 1 day ago and it works fine (got him on WOL). My only problem is that he says in the BRenBot console that he has loaded the plugins, but when i try to use the funsound LEFT or FUN he doesn't make any sound. Also if i ask for my rank ingame he says that there is no rank data found for my account.

All these plugins have i downloaded from: <http://new.brenbot.com> and i have placed them into the Plugins folder. The README's have i placed in the Docs folder.

Pls help me out

**\*\*EDIT\*\***

I worked it out by myself a bit and all the plugins are working fine now. I did added Jukebox now and it works also with funsounds etc. But the ranks doesn't work still. I got rank version 2.03.

Pls help

**\*\*EDIT\*\***

Finally it all works Even the upload to my webpage works great.
