Hi,

The previous time I installed renguard, it updated for 5 min and the game became better; I could join servers in a few seconds and when some one replied 'affirmative', for example, you could see e green <!> above its head (and when negative a red one).

Conclusion; the game was updated and if you ask me, I was very glad with it cause you could see faster who was screaming on the field 'I need repairs'.

A few weeks later i messed something up in my zero hour folder and repairing the first decade was use less. So i reinstalled the hole pack of games and then i noticed that renegade was again old and it takes 15 seconds again to join a server. The marks above the heads of allied players are also gone and renguard never updates.

How do i update the game back te way it was and has this anything to do with the skripts ?

Thanks.

Houston from Belgium
