I bought a new comuter and downloaded renguard from this website and when the game loads it says that no WOL name came be found - i cant see how to log in although i have been playin this for ages. It says its downloading core patch 2 then the following text appears:

[B][B]"RenGuard has detected corrupt files. In order to install Core patch 2, you need to download fixed copies and extract them to your renegade directory. Mix files (maps) belong to the data directory.

Click on those download links, unzip the files and put their contents in your Renegade/data directory to overwrite your files that do not match our expected profile, and when you are done restart RenGuard."

There is a link to "scripts" which when clicked it says page cannot be found??

What can i do to fix this???

Latest scripts > <http://game-maps.net/index.php?action=file&id=828>

Try reading this for cp2 problem >

<http://www.renegadeforums.com/index.php?t=msg&th=18836&start=0&rid=2> 1525

any file that has ".mix" at the end of the file goes in the DATA DIRECTORY of renegade and for ur login program go to renegade folder start up "game2.exe" and then login to XWIS(or WOL) and then exit start up "game.exe" or just launch renegade how u usually would.

EDIT: if you need any other files for renegade go here > <http://www.game-maps.net>

PS. if you have any more problems just say so.

The Renguard core patch downloader has a lot of problems. Easiest is to manually download core patch 2 and install it.

The wol name not found only happens the first time u run RG. Once you logged into WOL, it'll find

your nickname .
