I am helping a friend set up [BR] and a dedicated server over Teamspeak so things were going pretty good until we tried to get things going. I had him install all the programs and move the proper files to there places but then realized that you needed the older version of [BR} for the app to run. So we downloaded those and guess you could say installed them, but when we tried to run the application we got this error. So if any one especially Blazer or Dante or Christine can help me that would be great. We have run into a brick wall and I have set up many FDS using BR before and never run into this problem yet. So all and any help would be greatly appreciated....

Why aren't you using the new BR.net?

Okay....I went and looked around and could not find anywhere to download BR.NET

So for so I am stuck

SOLVED: I finally found a link at some site. Wonder why so few sites have this for download....
