For the past few days when i try to play renegade sometimes my rg crashes. It seems to happen randomly i think not sure though. But mostly the first few minutes after i start it up.
Ill hear a light humming noise for a split second then it cuts my renegade off.

Here is the message i get in the rg window...
http://img441.imageshack.us/img441/2678/terminatedlg9.png

When this happens i usually just start renegade with a Game2 shortcut and all is fine.

Also when i play on n00bstories AOW server you cant !rg someone. It will tell you they are NOT running rg. Even though they are i even !rg myself and i get this message.

I asked in game and people tell me its a network problem.

The 'unauthorized instance' has a lot of false positives, ignore it.

Also, when you're not running RenGuard, you won't be able to use RenGuard commands in most servers.

I would gladly ignore it but it terminates my game every time it popes up. I would normally think its a problem on my end when the game crashes but then this message is there.

I don't really use many rg commands but maybe !rg and !forcerg.
