It should run fine, as it does on my old WinME comp, it outputs the map you are transferring into a directory, not the same one as the map you are transferring, probably the root dir of LEredit..

What? Could you explaing that again in more detail, like where do I put it and stuff like that?

I tried running it but it said something like ""error. Sorry I forgot the error

Should run under Windows ME, though it is an old operating system and shouldn't be used any more
What is the error?
