Copyright (c) 1993-1999 Microsoft Corp.
#
This is a sample HOSTS file used by Microsoft TCP/IP for Windows.
#
This file contains the mappings of IP addresses to host names. Each
entry should be kept on an individual line. The IP address should
be placed in the first column followed by the corresponding host name.
The IP address and the host name should be separated by at least one
space.
#
Additionally, comments (such as these) may be inserted on individual
lines or following the machine name denoted by a '#' symbol.
#
For example:
#
102.54.94.97   rhino.acme.com   # source server
38.25.63.10   x.acme.com   # x client host

127.0.0.1   localhost
195.13.63.187 irc.westwood.com
195.13.63.187 servserv.westwood.com

You should probably remove those entries relating to westwood.

Edit - comment them out, put a # in front of them

no need to remove those entries, just update them once in a while.

159.153.208.17 servserv.westwood.com
212.162.52.234 irc.westwood.com

^^

Yeah, they updated the DNS entries long ago.
