View Forum Message <> Reply to Message

Well i have 1 server running and i want a second one but BRenBot doesn't support slave so i had to use 2 FDS's and 2 BRenBot's.

My problem is that i get an mis-communication between those programs:

Brenbot A works with FDS A+B

Brenbot B doesn't work with FDS A or B OR he works with FDS A+B (every second other combi)

How to solf this???

Pls help

Using slave servers is a bad idea anyway, running two masters is a lot more efficient.

The problem is that slave servers use the same remote admin port as the master server, so any bots connected to them automatically communicate with the master and all of it's slaves.

yea i now but is saw 2 slaves as the easiest way first

I said FDS A and FDS B which are both master servers and both have there own BrenBot.

I installed FDS A in X:\Westwood\RenegadeFDS\Server\ (brenbot included)

I installed FDS B in X:\Westwood\RenegadeFDS\Server2\ (brenbot included)

I had given them both there own serial code to avoid any serial errors on WOL but i got this local error between those FDS's and BRenBot's.
Oh, i turned Remote Admin to 127.0.0.1:4949 is this the problem?

PS. BRenBot Rules, DanPaul

You need to give a different port to the brenbots.

Subject: Re: Setting up 2 master FDS's and 2 BRenBot's

View Forum Message <> Reply to Message

Like FDS A+BRenbot A on port 4949
and
FDS B+BRenbot B on port 4848

I will try it tomorrow

Thx

They need different ports or players won't be able to connect, but they also need different
RemoteAdminPort settings, and remember to also update brenbot.cfg with the modified
RemoteAdminPort setting on the second server.

Quote:PS. BRenBot Rules, DanPaul
Thanks But don't forget everyone else who contributed and previously developed it.

I changed the RemoteAdminPorts in the FDS B and in BRenBot B to 4848 and it seems to work
fine. (FDS A+BRenBot A are on port 4949)

Thanks a lot

I got one more question:
Works BRenBot with RenAlert-A Path Beyond?

PS. i only said your name (DanPaul) by "brenbot rules" because i only know your name of a

---

interview of BRenBot.
I wanted to say great work for Hex to but i'm not sure of he made BRenBot or the Plugins?
Anyway it works

Yes, BRenBot works with APB, it's used on the official APB servers (although heavily modified by Oxi). However you will not get ALL the commands working, only the basic set of commands.

There was an APB version of the 1.50 installer, but not for 1.52 at the moment, just install it to a different folder to prevent it from overwriting the APB server scripts with the ones from the installer, or write the APB server scripts back afterwards.

Ok. Maybe i wait for the new APB-FDS first but than i will think about setting it up.

Thx for all your help and from the others 2 ofcourse

An APB FDS is easy to setup right now. -_-

1) Install .9935 FDS
2) Install APB Beta Patch 2 Full Installer OVER the FDS installation
3) Install BRenBot 1.52
4) Configure
5) Run

Done.

Can you use any other bot with APB (like NR or Cloudy)?

That meens i got a 900mb FDS if i want a APB server?

Than i prefer waiting for a new FDS program

I got a question again:
How do I configure BRenBot for WOL and GameSpy?

I already set a query port etc. but he isn't listed in GameSpy if i check with my own PC.

I need to change the gamespy_ip, I know that.
It is now 123.123.123.123 but do i need to change it to my LAN_ip (192.168.1.74) or
INTERNET_ip (82.95.55.122 which is my webpage to). I use a SpeedTouch-router to reach
internet.

In GameSpy_IP must be your public IP address so internet not LAN.

you dont need to change the ip, you cant see your server on gsa from the same network. ask a
other1 to check it if you server is on list.

LG Dirk is right.

Also, I have another one for you.

Go to http://www.dot.tk/nl/index.html

Then create a login. Forward your IP Adress 82.95.55.122 to www.yourname.tk. (This is free of
cost)
You could also buy a domain name (.nl or .com but ofcourse this does bring in expense)

When I used to host a dedi, I used this aswell, because you do not want people to remember an
IP adress number, especialy not if you wish to get popular.

If you have questions regarding FDS or Renegade, you can pm me or msn.

Goodluck with your server.

You can remove the add's at your website.

All you have to do is call, or text/sms once (1,75$)
Go into. tk options it's somehwhere.

And the add's will be gone

Remember though, that you need at least 25 visits or so (In a time spread of a couple of months.
Else you will have to reactivate under a different name, so keep your site updated/ interesting.
