lol, you see, this is what you get what you mate a Mammoth Tank with an Obi!! Whats it called?  
Mammi? hihi

I made these a while back, hope these help you. They should relate to the tutorial over at renhelp.

Back on topic. I tried renhelp, and got as far as aligning the orgin. I'm stuck on this part.

Once you`ve selected your origin, just move it into the convergence of axis on your stage (where all the axis meet).

I need some help here.

First off what's so fun with this topic?

@Cpjok: Read at Renhelp.net it says the name of the wheels there. Engine and wheels for steering.

I need some help here.

EDIT: I also need a better way to learn how to bone cars, not tanks.

Who wouldn't bone that shit? I occasionally anally chemspray harvesters to keep myself and the harvester satisfied.

Anally Chemspraying on the tibfield

Giving it from the side

Anal it while it's dumping on the dock

fuck yeah

Oh wait. That's just my common sense speaking to me, not my friend. My bad.

Also, no offense to the model maker, but you should make that thing a bit better. It's usually not a wise idea to just plop objects on top of eachother and call it a model.

All of the other members here seem to be rather dickheads than helping others.

If you got msn PM it to me, I'll help you out.
