I need the Full tutorial on BRenBot 1.52. I need help with getting rid of the Rengaurd part where a player can use the !nextmap and other commands without having to have rg i'd rather have rg OFF!. Also i need to know how to set Server mods like admin and half mod and etc in the server i already set in irc server but when i set it in moderators.cfg it doesnt work. please someone write a tut or suggest another bot with a full tut with the descriptions ive written above. thx

I scrolled down to the bottom of this page and found something that may help.

<http://www.renegadeforums.com/index.php?t=msg&th=27399&start=0&rid=23499>

brenbot 1.5 is discussed in that topic and I know u were looking at 1.52 so I don't know if it will help or not just thought there might be something in there.

Read the readme.txt , it explains for the moderators. Hint: check the auth-system.
