page failed to load or is invalid
this is what you get when to click on new account

when i fill in a new login name and password i get in but don't get any servers

it says no game server found at this time

after making up like 7 new accounts i made another one to try it again. Now it tells me im only
allowed to have nine accounts on 1 serial. All the login names i made up are shown in the display.
at also says press reset password if u want to reset all passwords.

if there any other way to make an account?
How do i Reset password?

thanks,

Why do you need more than 9?

If you want to reset your passwords, go into Renegade's Chat (login with an incorrect password)
and type "reset passwords". A window should pop up telling you the new password.

i don't want 9 accounts

i was trying different login names to see if it would work, than came the message that i had more
than 9 accounts and couldn't make any new ones.

ok the reset password worked
now have to delete all those weird accounts

same way?

like

"delete password" or something, or deleting isn't possible?

Ok, so. The new account button doesn't work, I'm not sure why. Just type in any username you want (has to be 8 character, I think) and type any password in the password box. Then login

Try other nicks if you are successfully logged in that nick is yours.

Read this sticky.

Also please next time make your own topic, so it draws more attention.
