I was wondering if it could be done to make Renegade Gamepad compatible.

http://xpadder.com/

This nifty program does what you're looking for. Essentially, you map keys to the buttons and sticks on your controller. It works great...

... But I tried using it with my 360 controller, and playing Ren with the gamepad was a total pain in the ass.

I used that with my PS3 controller. Result: Retarded to say the least.

Why anyone would want to use a gamepad on ren is beyond my comprehension.

Yeah, it's really, really awkward, even after tweaking the joystick's dead-area, speed settings, etc.

Still, XPadder is the ticket.

Why else, because they are dumb as fuck?

Negative, input system isn't designed to do that.
