Is there a way to put a password on files and folders without having to put them into a rar or zip file?

No, really... http://www.google.be/search?hl=fr&q=password%2Bfolder%2Bwindows&btnG=Rec herche+Google&meta=

It IS this easy. You check google for some key words, when you find a program you check google for "<program name>+review". If you read a couple of good reviews of it on decent sites, then you're safe.

You need to learn how to use google, mate.
