Ok...I bought the game, installed it, ran fine. I got the notion to upgrade my drives to improve the graphics a little. After i did that, when you put the cd in, it would come up to the WWconfig box and the detail level would lock at the lowest setting. Previously I was runnig it about mid level in single player. So I unistalled the new drivers and restored my system to the way it was when I first installed Renegade. Still the WWconfig would come up. I unistalled the game and when i tried to reinstall, setup crashes everytime. I've reinstalled Windows, and reinstalled the drivers that it worked with, but it still crashes. Any ideas?Nvidia tnt2 m64....32mb cardp3 800mhz256 ramWindows ME confused I emailed ww but they just tell me do what I have already told them I did. The cd's are fine...the game has worked before and the autorun comes up.

IF you've reinstalled Windows and its still not working, than that is bizarre. 90\% of PC problems are solved when you reinstall Windows, the other 10\% is solved by a format.

I'm sort of holding off on the format just cause I spent on weekend messing with it to cleam up my harddrive. It not that its hard...it just takes awhile. I wouldn't lose much either because I just formatted like a month and a half ago. Waiting to see what westwoods gonna tell me to do

---

besides what I've already told them I've tried.

The game worked fine on my machine, then I reinstalled Windows and everything went down the toilet. First I was not able to install Renegade, because setup froze everytime. Then I installed it manually and now I#ve got heavy graphic errors. I use the same OS and the same components as before, even the same drivers.HELP, please.Basileus
