does anyone have a link to a switch box for RCA cables that has a tc input and output

heres my problem the one i have now is also a RF modulator you can plug in a cable in and and it has a cable out plug and also has a rCA in then splits into 4 RCA out to i can switch which one i want to load

which works but heres my problem it does not have a RCA OUT only IN so while it connects to my TV and switch the components i cant connect it to my surround sound so that all my systems (nes,64,ps2) because the only RCA has to connect to the tv and my surround sound dont have a RCA out ether....

to make it easier

Surround sound > Switch Box > Tv

but since neither does my Switch box or surround sound dont have RCA Out i can only connect one i want my sound sound to connect to my Switch box then connect OUT to my tv then all my systems plug into the extra RCA plug ins so that when i switch which system to play they all have audio that comes out threw my surround sound speakers so im looking for a switch box that has TV in/out put along with all the RCA plug ins it splits into for the systems and yes i don't know what to google i goggled RCA switch boxes and tv out put and input rca switch boxes and etc and came up dry this is what i currently have

<http://www.newegg.com/Product/Product.aspx?Item=N82E16882641190>

That thing you linked to will probably do the job, assuming it takes RCA as input and RF Coax is the output. I don't think a 'simple' adaptor exists, since the signal has to be modulated, which requires power. I might be wrong though...
