The download link for full BRenBot 1.52 (includes Core Patch 2) is corrupted. Is there anyone who can fix that?

I don't see why it would be corrupted since it's not been touched since it was first uploaded, but I will upload another copy... will take a few hours though, asymmetrical connections are a PITA.

New copy uploaded, if it's still says it's corrupt make sure your not using a download manager, I have found they tend to screw up installers sometimes for some reason.

Well I remember it used to work fine... I don't know what happened. And no, I didn't use a download manager, just IE7.

Thanks though.

I don't use IE7, I downloaded it from a windows 2003 box. I use firefox.

Well as I said I uploaded a clean copy the other week, which I know works because I tested it before uploading it, so either the file has become corrupted on the server again (unlikely, otherwise these forums would be going down all the time if it was that likely to screw up files) or something on your computer is causing it to become corrupted during the download. As I mentioned before, I find that download managers and/or accelerators tend to screw up downloads of NSIS installers.

I have just downloaded both the full and mini installers from the new.brenbot.com website to test them and both are working fine at the moment.

What browser did you use to download them? I've used both IE7 and Opera and it's been corrupted each time. Oh, and when I originally made this topic, I was using Windows XP... I'm now using Windows Vista and the same thing is still happening. Could it be a hardware issue? :S

I just tried downloading it 5 times in a row, 2 of the downloads worked, 3 were corrupted. Why I have no idea, but I am guessing it's some sort of issue to do with downloading large files off the server, but the file actually on the server is apparently OK. Not much I can do about it I'm afraid...

Game-Maps.net? They have the 1.50 version but not 1.52, so they need updating anyway.
