[View Forum Message](#) <> [Reply to Message](#)

They have to open automatically (on double click) if they are installed properly.. to edit grab gmax and W3d importer/exporter to edit (a pain in the ass sometimes)

<http://www.renhelp.net/index.php?mod=Content&action=view&id=Getting+Star ted>

double click on w3d files and there happen nothing ????

Subject: Re: how...

Posted by [samous](#) on Fri, 31 Oct 2008 21:41:05 GMT

[View Forum Message](#) <> [Reply to Message](#)

you could also use Renx (from renegade tools) and just get a plug-in for importing W3D files... if you want it, i can find it for you.

=samous

EDIT: its a easier way to edit them, its ment for all 3D suff.

If your trying to edit them like chage the way they look you need gmax, but I dont know how to use it to me its fucking hard so someone else will have to post here and explain step by step of how to do all this advance modeling crap

You will need the W3D Importer

Importer:

<http://www.renhelp.net/downloads/W3DImporter.zip>

How to install, readme's etc are all included.

Also you probably want to use the RenX gamepack for GMax.

This is installed together with the RenegadePublicTools:

<ftp://ftp.westwood.com/pub/renegade/tools/RenegadeToolsInstaller2.exe>

After installing the Importer (and RenX what I did) it should look like this when booting:

The UI should look like this. In the MAXScript menu you should see 'Import W3D':

Click it and browse for a W3D file:

After this hit 'Open' and voila! Your W3D into Gmax/RenX

I hope this helped you.

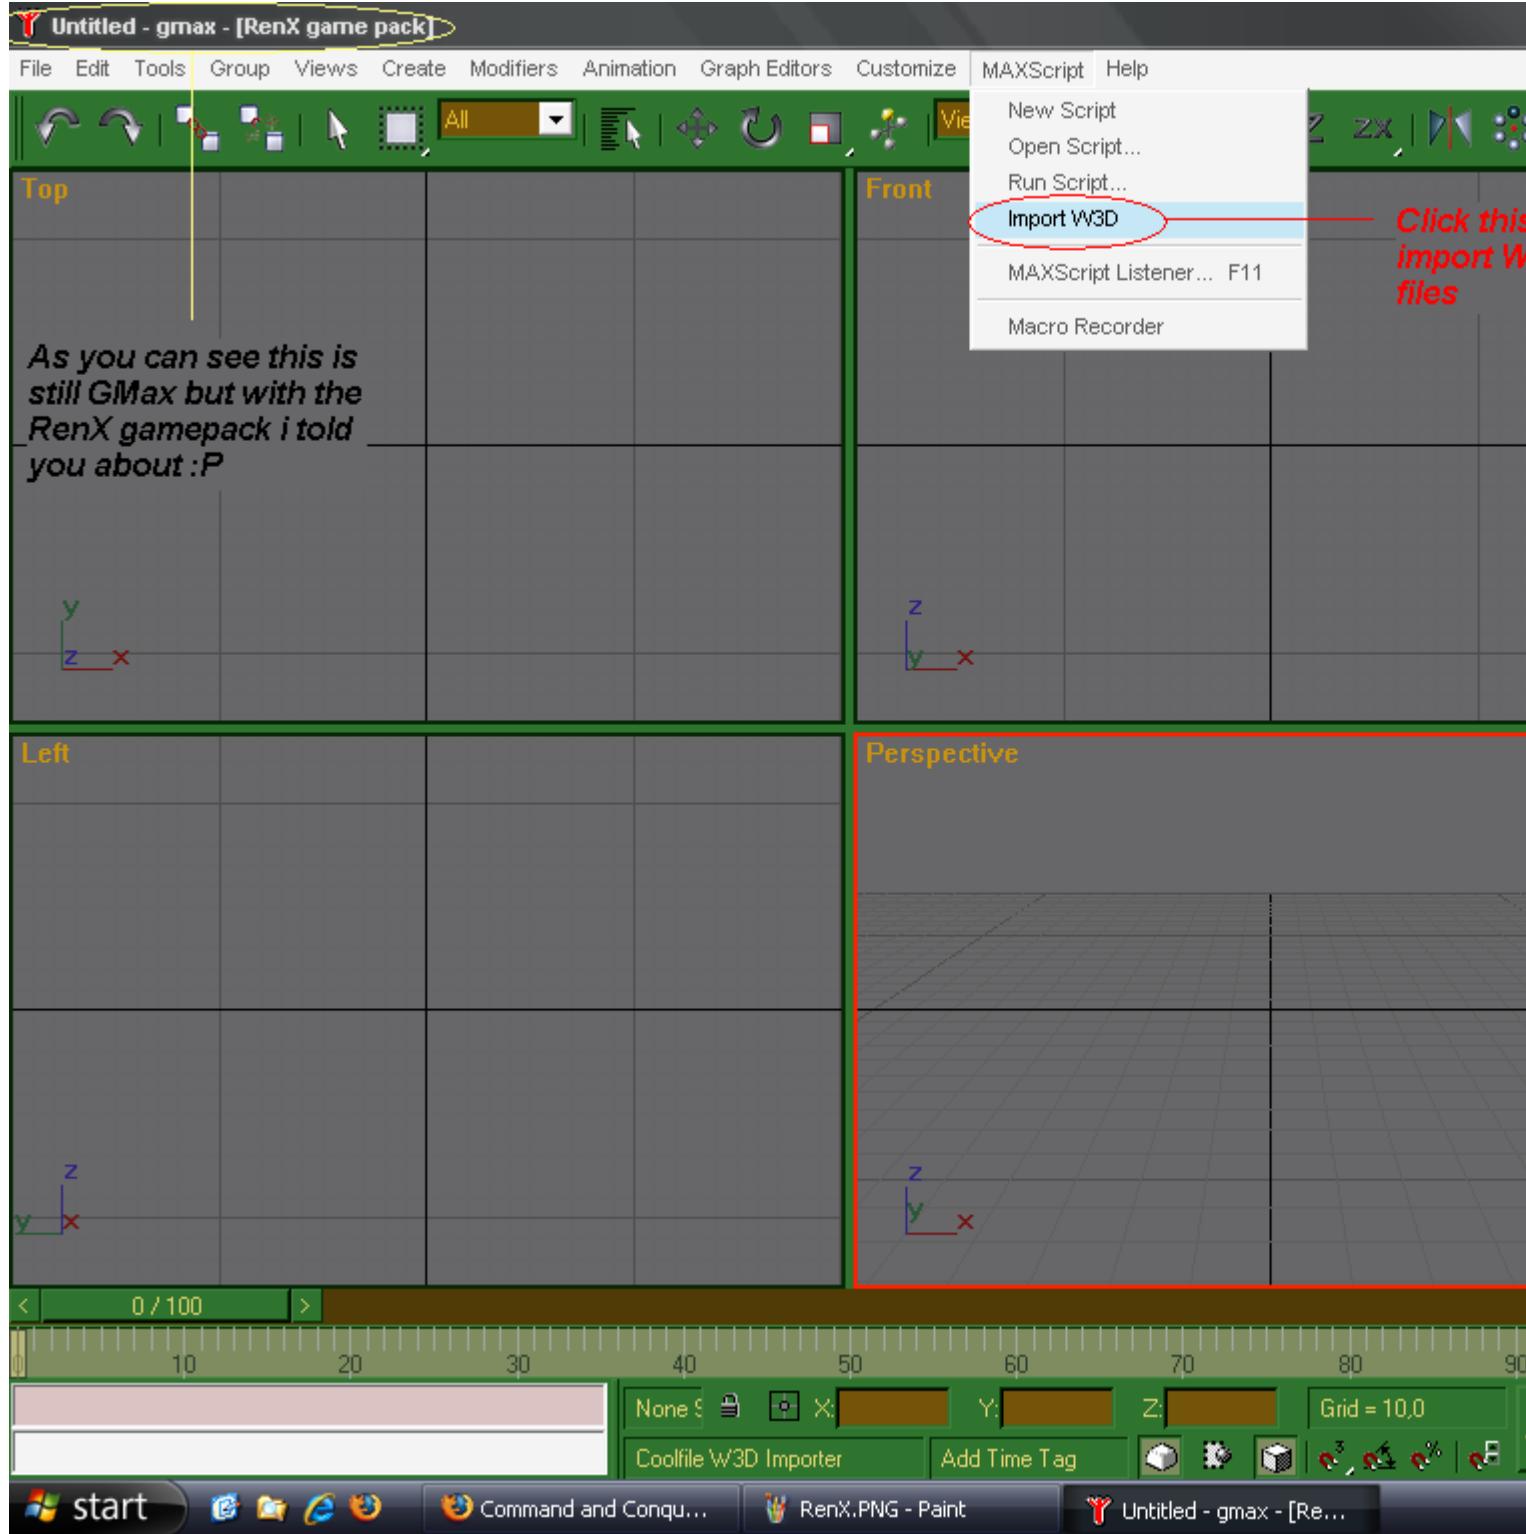

PS. If anyone knows how to make Spoilers it would be much handier for me to post images while keeping message small

Lol

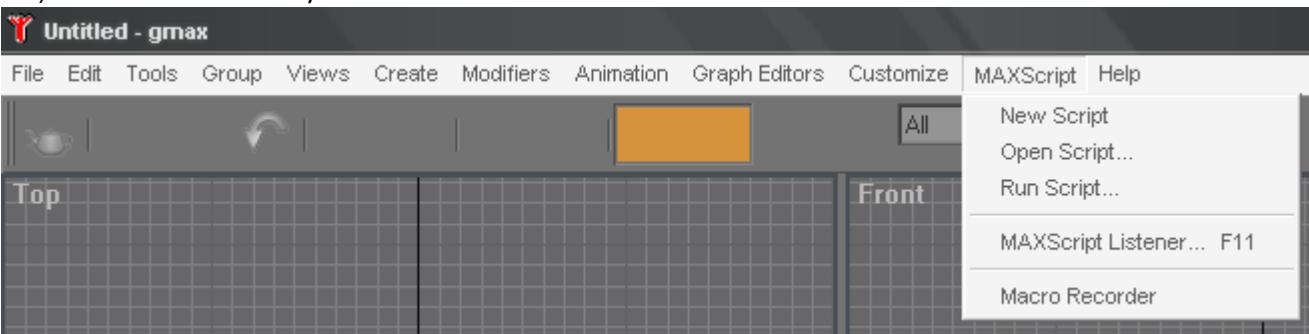

You sure you installed correctly?? I miss the RenX Gamepack in the left upper corner...

Here is my GMax:

As you see it is missing in GMax but as i showed you above it is in RenX. Try to install RenX. After that reinstall the plugin. Than it all works fine as you see on my pictures

It's not really that hard to load it up lol.

Goto Maxscript, click on Run Script, load up the Script file if it's in your Scripts folder in Gmax/RenX/3d's Max. And then goto the Utilities tab on the right side of Gmax/RenX/3d's Max. Then click on MAXScript, then goto where it says utilities on the bottom of that new tab and select W3D Importer, tada.

[View Forum Message](#) <> [Reply to Message](#)

... i'm sry, but that is actually kinda a contradictory, you say its not to confusing, then post all this mumble "Goto Maxscript, click on Run Script, load up the Script file if it's in your Scripts folder in Gmax/RenX/3d's Max. And then goto the Utilities tab on the right side of Gmax/RenX/3d's Max. Then click on MAXScript, then goto where it says utilities on the bottom of that new tab and select W3D Importer, tada." wich is huge, and made no sense to me, even though i already installed it.
