Subject: Co-op with 2 computers
Posted by sauron--the--king on Tue, 11 Nov 2008 14:31:18 GMT

Hi,
I want to play with my friend on LAN
I want to fight with him against bots
I always make my own maps in LEVEL EDIT,
but I am always wandering how I can play with
1 other. So I had a few ideas how I
could do this:
-Host a game and let 2 players be GDI>>>how?
-Make a map with enemy bots who attack both teams,
 and I can't attack my friend.
-Me and my friend be both neutral, so
 we can attack enemies and they can attack
 us.
-Put on friendly fire and use the script
 "Hunt the player". The bots will attack
 both players, but it's always the one or
 the other. The one who is nod, will still
 take damage from the nod bots. But I want
 them to attack both the players equally.

Does anyone know how I can do one of the above
things? If anyone knows any of these things it
would be a great help.

Kind Regards,Brian

-Host a game and let 2 players be GDI>>>how?
possible, have a third pc (ore a tricky way over WOL ore GSA)

-Make a map with enemy bots who attack both teams,
and I can't attack my friend.
set the enemy to "mutant", but you can attack your friend

-Me and my friend be both neutral, so
we can attack enemies and they can attack
us.

set your teams to mutant (in LE)
(and you can damage each other

(MOD forums?)

Thx man
thanks for quick response
But one more thing, how can
I adjust the team to mutant in LE?
Kind Regards,
Brian

but why in lan? why you cant play over WOL

Subject: Re: Co-op with 2 computers
Posted by sauron--the--king on Tue, 11 Nov 2008 19:31:44 GMT

ey,

I have only used LAN al my life so I don't
even know what WOL is
But I only have to know is how I can
get the enemy to shoot at me and my
friend. And it would be nice that I couldn't
kill my friend   If I am on the
Mutant's team with my friend it would be good.
Or if we would be together on one team.
So I hope anyone knows how to get one
of these things.

Kind Regards,
Brian

WOL

W:westwood
O:on
L:line

(main internet multiplayer location, everyone who play's over the internet uses it to conect with thousands of others [in renegade].)

EDIT in []

ey,

I only use LAN because I only have
1 original game. So that why

Kind regards,
Brian

hey,
I have played online on one computer, but
on the other one where there isn't a real version
of the game won't see any of the games online.
Maybe there could be an other problem which
causes this. So sorry if I mistake me with
this.   But I do know how to play online,
I often go to Wittebolx so
But the other computer doesn't have to go
online, I only want to LAN own made maps

---

with it like Co-op

Grtz,
Brian

Renegade only allows one unique cd key on-line, so thats probably why your other computer can't see any other games.

Install your official copy on both computers. You can use an official copy on multiple computers at the same time, even to go online.

I was always blocked when attempting to do WOL in the past with 2 game with the same CD key, LAN worked fine though.

hey,
I found the thing I needed, I've used
the script "M_10_Playertype_NOD" on us
both. I've set all enemies to GDI and
now they will attack us without any
script on them, only the uselnate behavior
thingy. Thanks for all the help
Kind Regards,
Brian

Cool, I never knew of that script. I think I'll go play with it.

Some of the little mods I made (in my siggy) are botfighting, but they're little projects for my own amusement and probably not worth downloading unless nothing better exists. By the sound of things though, you seem to know LevelEdit well enough to make your own mod.
Have fun killing mindless AI bots
