Hi,  
I'm trying to make some bots who  
follow a looping waypath in LE.  
They must stop and follow an enemy  
unit when they see one. But when the  
unit is killed, they must return to  
follow their waypath. Any ideas to do this?  
Kind regards,  
Brian

Easy tutorial on Renhelp, BUT bots won't return patrolling after seeing an enemy, so not perfect

Why did you insist  
on typing your question  
in such a fucked up  
sentence? The enter key  
is not needed this much.  
Kind regards,  
PLECOS

Hi,  
Thanks for all the information  
But does anyone know how this script works:  
JFW\_Guard\_Duty  
Because I think I can use this one for  
the bot, but I just won't get it functioning.  
Kind regards,  
Brian

I actually find it easier to read and take in as the amount he wrote would go across the screen and  
sometimes might put me off.

Beneath this you can find a Screen shot  
from the map I am busy with. It may help

you with thinking how to make the script things work.

Hi,  
I found a new way to get a patrolling bot.  
If a bot has "go to object" script on him,  
he will also attack foes on the way. So  
what if you teleport the object which he is  
following, each time he is near it, he will  
turn back and go to the object which is  
teleported now. The object must keep teleporting  
then. I thought I thought I had it functioning,  
but the "JFW\_Zone\_Send\_Custom\_Preset\_Enter" script  
just won't work. Each time the soldier comes  
in the zone, which is around the object,  
the object must teleport back to the other  
side, so he will keep "patrolling". The object  
will be teleported with "JFW\_Teleport\_Custom".  
The object had 2 of these scripts attached, one  
for teleporting the item back and the other one  
teleporting it to the place the soldier began.  
For a picture look to the message above.  
Can anyone help me with this?  
Kind Regards,  
Brian

Hi,  
I have found a better way in getting  
patrolling bots. I use M03\_Patrol\_Base.  
But once they saw me they won't continue  
their waypath. The bots walk slow, just  
like the way I want it. Can anyone help?  
Kind regards,  
Brian

With that script alone, they will not continue patrolling. I don't think there's a way to fix that either.

CarrierII wrote on Sun, 30 November 2008 15:39DanPaul88 is the man for RenAI AFAIK.

I asked DanPaul88 for the patrolling bots. I asked  
him if he would post his answer if he knew it  
right in this forum.  
Kind regards,  
Brian

I usually write my own AI scripts instead of using the generic scripts to give me more flexibility over their behaviour. I am at work at the moment so I can't actually check into this, but try reading the readme.txt (ctrl+f to find any references to waypoint might be a good start) to see if you can find anything useful.

If I remember tonight after work I will have a look to see if any of the scripts do what you want, if not perhaps I will write one to put into 4.0. From my experience with the Renegade AI it is likely that the reason it does not already exist is because when the bot returns to patrolling they will start again from the beginning of the waypath instead resuming from where they got up to. A simple solution would be some daves arrows with an attached script with a patrol ID and it's order in the patrol, and using another script on the AI to remember which one was the last one it visited, and therefore which one it has to go to next.

Remind me to look into it at some point.

If I remember tonight after work I will have a look to see if any of the scripts do what you want...

Hi,

If you find anything, please tell me  
I tried many things, but I just can't  
find any scripts or combination of  
scripts, so it will work the way I  
want. I would love to see the script  
that will function the way I want

Kind regards,

Brian
