I changed to Vista (no choice in the matter) and downloaded the same 'DVD Clone' from lalalalala. I was able to play online before with the same download. Now I have Vista and Gamespy won't pick up the game. I followed all the help hints offered by gamespy help. I can play the offline game in Vista so I don't think it's a totally Vista related problem

Pls help, I wanna kick Sakura's butt so bad. That bitch gets me every time .

P.S. I would buy the game but I live in Korea and can't get it here.
Thanks! Mick.

Do you run gamespy in admin mode? Also don't post any Warez related websites.
