Did it happen after a re- installation? Because ren sometimes has graphical bugs after a clean install. Mine, for example, has some missing textures on the menu buttons since last installation.

That logo looks like the 3d spinning "pimped menu" logo that Di3 made.

If your problem is caused by a modification, then ask for help to the person who made that modification.

the Di3 logo works fine, and wasn't the problem. any ways, look at the (suposed to be) 2d imiage in the background, all bent!

I found the problem, somewhat. My computer's video card (guessing) got some kind of error, and ALL 3d models\textures in ALL my games (i tried SPORE, RENEGADE, ZH, ect) where effected. I rebooted, and they where back to normal

=samous

EDIT: here vid of it:
