I opened Renegade (updated to 1.037 version) and it started EVA movie then I pressed any of keys it closed to desktop without error popup.

I am running Windows XP Pro 64-bit (latest windows update).

I let it run throughout the movie and it got to Menu I clicked Single Player and click load game etc. When it loaded it worked fine but when I press WASD button or ANY keys it closed then back to desktop without any error popup.

Any idea how to fix this?

Thanks,
Exor

EDIT: I downloaded the Script 344 and installed it went in game works fine without close after press any keys during the movie or in-game at the same mission I was working on. After a movie then new mission loaded and I press any keys at next mission and it closed. Still not sure what's causing this. Help please?
