Ok, first of all, I re-installed Renegade because it was having issues. I installed the CP2 (FULL) from the downloads section. Also, download the 1037 patch thing. I load up Resurrection click and join a server, after I am in-game I click (ANY) kind of button to move or do anything, and Renegade closes. I can't do anything at all. but look around, if I try to move it closes. I can't figure it out.

Can anyone help me with this issue?

It would be much appreciated

Thank you

Maybe you didn't follow the correct order? There's a sticky explaining how to reinstall Renegade in this subforum .

Install step by step and check when the problem starts happening. It may as well be a RR problem.

---

And if that doesn't work look in your renegade file for crashdump.txt

I installed it step by step and it still happens. But, I no longer use Renegade Resurrection...

[Edit]: Ok, Problem fixed, BUT, now I can't play in any servers...

I log in to WOL click and join a server the loading bar gets to the end and stops then closes... any ideas?

Did you do it step by step? This means: install step 1, start ren, test if u can join a server; if yes install step 2, etc.

You don't have a firewall or peerguardian2 active, do you?

---

[View Forum Message](#) <> [Reply to Message](#)

---

Yes, I did everything step by step.

Yes, I can join servers.

No, I do not have a firewall active when I play Renegade...

The problem is, when I join a server the loading bar goes to the end and Renegade closes...

---

Than there should be a 'crashdump.txt' inside you renegade folder (where the EXE's are)

"C:\Program Files\EA Games\Command & Conquer The First Decade\Command & Conquer Renegade(tm)\Renegade\crashdump9.txt"

or

"C:\Westwood\Renegade\crashdump9.txt"

The number depends upon which is your latest one so if I have which ends in 15 and another which ends in 7 pick the one which ends in 15(the highest number)

What am I supposed to be looking for in my crashdump...

Yes, I do have some, I get one everytime it closes...

I don't have a CrashDump folder though...

You still didn't get what I ment. I ment you do a step, then you test if everything works, etc. If you had done so, you'd have noticed that once you install scripts 3.x, the system starts crashing and not before that. The crashdump namely shows 3d8.dll to be the problem, that's a file that's added when you install scripts.

I'd recommend you to use version 2.9.2 of scripts, which doesn't come with 3d8.dll for the moment. I'm not 100 % sure where to download it, though. You can also decide to just install core patch 2, which comes with scripts 2.x and not install any newer version of scripts after that.

Or like you said deselect the bloom and example shaders in the 3.4.4 scripts. Also game-maps.net has the 2.x scripts.

MasterEvolution wrote on Wed, 06 May 2009 19:06Or like you said deselect the bloom and example shaders in the 3.4.4 scripts.  
If it's 3d8.dll crashing, that won't help unfortunately.

Install Ren.  
Install 1.037.  
Install CP2.  
Install 2.9 or 3.4 Scripts.  
Install Any Skins Or AntiCheats you like to use.  
reboot.  
Play Ren.

That's how I install Ren.
