Tried uninstalling the driver and then reinstalling it? You might have a mixed driver.

Go into Safe Mode, remove driver. Restart
Go into Safe Mode again with interweb connection and download new driver. Install Driver. Restart.
Go into normal mode and hopefully listen to sound

if it still wont' work. Then you can try what i did after having a sound problem and couldn't fix it even with a new sound card. Go to Controll Pannel > Administrative Tools > Services > Windows Audio > Options > Turn on. or just press play/start

---
