Ok, here's the list:

colors are messed up (I get westwood logo's all in many places) harvester doesn't move (neither one) water doesn't show up

(Please excuse the extremely wide screen, I use dual monitors)

This happens even if all I do is open the file and save it, so it has to be either my method of install messed things up (I've reinstalled both), my options that I've selected (i.e. shaders etc. (but what about the harvy?)), my method of saving (I followed the instructions: http://www.renhelp.net/index.php?mod=Tutorials&action=view&id=26, or could it be the scripts somehow? (I'm running scripts 3.44 (on renegade and in level editor) and cp2. I have all the options checked (i.e. shaders etc.). If anyone knows why any of this would happen, please let me know how to fix it.

## maybe this will help:

```

Ok there is a folder inside this rar file, put that folder in the same folder where you got the fields .w3d model. NOT the files inside this folder, the folder it self. I hope you understood me.
