The 1000 char that has ion cannon and is in the armor, it looks like it is warped or the polygon model is messed up. It looks horrible. Would this be because something is wrong with my game or what? Other models look fine, its just the PIC armor model

Isn't this a problem that occurs on high performance (low graphics) settings?

Yes, either set your model detail higher or live with it.

or it is the LOD? because my graphics are set to highest and it still happens often.
Run > Regedit > HKEY_LOCAL_MACHINE\SOFTWARE\Westwood\Renegade\System Settings > Dynamic LOD budget and Static LOD budget. Set it to a higher number

I changed geometry detail to med and it fixes it. Never used to do that. I have it set low because it makes it easier to aim mobius/repair gun. Any other way I can fix it?

Note that if your running Vista you need to run Renegade in Admin mode or it wont pickup the settings from that location.

Hmm i have it at high and it never happens to me :S

Only thing i can help you with is telling my settings which is for both 10000

Changing it to 10000 fixes it, but it also sets geomotry detial to high making repair gun line jaggid.

Hmm didn't noticed that at my place. Not that im an engineer much

BTW i didn't edited manually, i just set everything on high in advanced settings in the WWConfig.

This makes the value 10000 automatically.

Well when everything is at high, it is fine. I just prefer repairgun and volt gun to have straight lines
